

T H E
Exact Dealer

REFINED:

Being a Useful Companion for all Traders.

In THREE PARTS.

CONTAINING

- I. A Description of the Commodities, Coins, Weights and Measures of Great Britain, and its neighbouring Countries. With Useful Directions about Entering and Taking up Goods at the Custom-house: Instructions about Bills of Exchange, and the Keeping of Books of Accounts. The way of Recovering Debts; likewise Exact Tables of Accounts ready cast up.
- II. Containing a plain Institution of Arithmetick in all its Parts; with an excellent and easie new way of multiplying Foot-measure in Feet and Inches by Feet and Inches, without Reduction, and applied to the Measuring of Carpenters, Joyners, Painters, Plaisterers Glasiers, and Bricklayers Work, &c. And of Solid Timber, &c. Also the whole Art of Gauging, with several curious Tables. And very necessary Observations relating to the Measuring of Land.
- III. Containing the Travellers Guide through all the Principal Roads in England. An Account of Fairs, Carriers Inns, and Days of going out. Also the Rates of Post-Letters. With other Matters not before made publick.

The Sixth Edition, Enlarged.

By J. H. Author of *The Secretary's Guide*

LONDON, Printed for D. Rhodes, at the Star,
the Corner of Bride-Lane, Fleet-street. 1706.

Price Bound, One Shilling.

Licens'd,

THE
P R E F A C E
T O T H E
R E A D E R.

HAVING consider'd the great Want of
a Book of universal Instruction in
Trade and Management of Af-
fairs, I thought it highly necessary, for the
Benefit of Traders and Artists of sundry
kinds, to turn my Endeavours that way,
that by compiling what must undeniably
be useful and necessary, I might the more
boldly recommend it to the Industrious
part of Men, whose discerning Judgments
(if in any thing I have fail'd of my design-
ed Aim, in serving and obliging them)
may cast a friendly Censure on this my
Undertaking: Nor let any, before they
have perus'd and seriously consider'd it,
judge rashly, and proceed to condemn
this Book, by fancying that so small a Vo-
lume can never effectually contain what it
promises in the Title-Page, lest when they
find

The Preface to the Reader.

find they have been over-hasty in Censuring, they are forc'd, at least tacitly, to acknowledge the Pains that I have taken to advantage them, are but slenderly deserved by the too Cenſorious, whose first Objections, for the most part, border upon Ingratitude. However, let me tell the World (or that part of it whose Affairs it mostly may concern) that if I may presume to judge in my own Case, (or indeed my Good-will towards the Industrious, may freely discharge it self) a more Useful Book is no where to be found, relating to Trade and Business, no, not in the largest of Volumes, if taken singly. For it shews the Commodities, Coins, Weights and Measures of *England, Scotland, Ireland*, and of all our neighbouring Countries; with the Comparison of their Weights, Measures, and Coins, with our own. You also here may inform your self of the several Distinctions, by which Commodities are bought and vendd; with their true Value and Goodness, and what Allowances are given; how to calculate the Discount of Money, when Goods are paid for before the Time agreed on, a Custom very common among Merchants and Tradersmen; and Directions for the Entering Goods at the Custom-House, and shipping them

The Preface to the Reader.

them away to Foreign Countries; also how to Enter and Take up Goods inwards: Likewise, what is to be consider'd in Drawing and Remitting Money upon Bills of Exchange, and what is to be done in case of Refusal or Delay in Payment of those Bills, to secure your self against the Drawer, Remitter, or Assigner, &c. With excellent Directions to keep your Accounts, in a Method altogether New, as plain as the common and confused way of Shopkeepers, but as exact as that call'd the *Italian* Method of Book-keeping, used by Merchants of great Business. The Methods used in compounding Debts, with Directions how to proceed on Statutes of Bankrupt, and what is to be done in recovering Arrears of Rent.

And that nothing might be wanting to your help in Trade, you have several excellent Tables ready calculated; and their application in Uses and Examples, both for Expences, the Interest of Money, and the Value of Commodities, plain and shorter than any yet publish'd of the like kind.

You have likewise an easie and plain Introduction of Arithmetick, whereby the meanest Capacity may learn the Grounds of that excellent Science in a few Days; and the Application thereof to the Mensuration

The Preface to the Reader.

furation of Carpenters, Joyners, Glasiers, and Bricklayers Work; and to the Mensuration of Solids, in a Method also wholly new, which, by the help of a small Table, takes away that unnecessary Trouble of reducing Integers and Parts to one Denomination, and of using Decimal Arithmetick. To which I have added the whole Art of Gauging, with excellent Tables for that purpose; also useful Tables relating to the Mensuration of Land. And lastly, a compleat Description of the Roads of *England*, the Distance of the most noted Towns in each Road one from another, and the Counties in which they are. With an Account of the Carriers, Waggon, and Coaches belonging to any Stage or Town of Trade; and where they Inn, and where they go out of Town. With many other things very useful and necessary to be known by all who desire and aim at Exactness in the Management of their Affairs. For the perusal of all which, I refer you to the following Pages, not doubting but you will find the Benefit intended thereby, which that you may, is all the Compiler hereof wishes, for the great Trouble and Pains taken for your Instruction. So I take my leave, and am

Yours to serve you,

J.

T H E I N T R O D U C T I O N .

AS *Profit* and *Advantage* are most desirable, so are there sundry Ways (without running beyond the Bounds of *Honesty*) to acquire them; yet those Ways require *Understanding*, *Prudence*, *Diligence*, *Caution*, and *Industry*; for without some, or all of these, Men may hope and expect in vain, unless Fortune (which does not frequently happen) should cast Riches upon them, beyond their Expectation, and surprize them with her Bounties, when they supposed she had altogether neglected and forsaken them; as by the Death of Relations, fortunate Marriage, return of Ventures from Sea, the Expiration of Lives in Leases, or Tenure of Lands; with many the like Accidents, or advantageous Chances, which for Brevity sake, and as being little to my purpose, I shall wave; considering my main Aim and Drift is, to admonish and direct Men how to improve themselves, and rise by Industry in Trading, and managing Affairs; as first, with *Understanding* rightly to be knowing in what they undertake, that they, by entering upon that they undertake not, be not liable to be Cheated and Imposed upon by such as lie upon the catch, to take Advantage of their Weakness in Knowledge of those Things they pretend to. Secondly, *Prudence* in knowing how to manage and turn their Affairs and Undertakings to the best Advantage, whereby

B

the

the Understanding will be improv'd, and Overreaching prevented; for even the Crafty, when they perceive a Man sufficiently prudent to countermine them in their Policies and dark Contrivances, will forbear (as much as may be) to attempt any thing where they are not likely to succeed, but rather turn their Force upon some weaker Fort, more liable to be undermined or battered down by Insinuations, specious Pretences of Friendship and Assistance, and many the like Stratagems, by which they too frequently interest themselves in the Affairs of young Men especially, and often lay a Foundation upon their Ruin; which, indeed, is the thing they at first aim at, and can be no way better prevented, than by a prudent regard of Business, and Self-management of Affairs in the Beginning of our Undertakings: For when we are once well settled and grounded in any Occupation, the next thing, which is Diligence, will soon set us (unless some extraordinary Accident happen) above the reach or danger of a Miscarriage. And to keep off any such Thing, *Caution* must be used how we engage or interest our selves in other Men's Affairs, by being Bound, buying in Partnership, undertaking to be Executors, venturing considerable Matters to Sea, taking false Mortgages, or Purchasing where there is no good Title, with many things of the like nature, that require Caution and ought not rashly to be undertaken. The fifth thing to be consider'd, is *Industry*, which, indeed, is the Sister to *Diligence*; but yet exceeds her by some degrees on this Account: For a Man may be diligent in keeping what he has, and yet not industrious to get more: A Man may be diligent in the Station or Calling wherein he is plac'd, yet not industrious to advance himself, by pushing forward and laying hold of the least Opportunity that offers it-self for his Promotion; and this is, indeed, the

reason

reason why many spend their Lives in a mean Condition, because contenting themselves to labour in their first Undertaking, how low or mechanick soever it is, they will not venture out of it, though apparent Advantage offers it self; lest (like a Fish taken out of its proper Element, not being long able to breathe in the thinner Air) they should faint so much in their new Undertaking, that they would not be able, that failing, to make a retreat to the first; and therefore conclude they had better be upon sure Ground, than run a Hazard where double Advantage will be the Reward of their Industry, if they are successful; but nothing as they fondly propose to themselves) if they chance to miscarry. Some again there are that hold, That if a Man be destin'd to Prosper and grow Rich in the World, he shall have his lucky Day; Riches shall flow in upon him by means unsought, and ways unexpected: And on the contrary, those that are doomed to be Poor, strive against the Wind and Tide in vain; for though they are both diligent and industrious, *rise early, sit up late, and eat the Bread of Carefulness*, yet they shall (after all that) find themselves in the same Condition, as if they had liv'd supinely all their Days. But this Rule holds not good, as is frequently demonstrated, and is, for the most part, the Sluggard's Plea, who living poor, by reason of his Ease and Idleness, attributes (Atheist like) all Things to Fate and Chance; when, on the contrary, Solomon affirms, *That the diligent Hand shall make Rich, but the Sluggard shall have Scarcity of bread.* Much more of this kind I might instance, for the Instruction and Encouragement of those that are willing to strive in their Callings; for it is most commendable, so it contributes most to their temporal Felicity. But this being somewhat a Digression from my Purpose, I now

proceed to tell the Reader, That I have compiled this Book chiefly for the Advantage of Traders, and have filled it with such Variety as well of Things useful and absolutely necessary to be known (by those that would thrive) as other Matters of Weight and Moment, by which those that are already knowing may be improved. Nor have I spared any Pains to reduce them to and render them in such a Method as may make them easy to an indifferent Capacity, the Particulars of which are too various and numerous to be mentioned in an *Introduction*. However, in general, I take the boldness to affirm, That I have omitted nothing that I conceived might be in any sort convenient to be known, relating to Trade, or its Dependencies: So that I may term it, *A Store-house of Instructions, or seasonable Directions, compiled to supply the Trading part of the Nation with the Rules, &c. that have hitherto been so much wanting, and with Earnestness sought after and desired*; and conclude, That a Book more useful (of this kind) has not hitherto appeared in the World, which makes me hope (tho' it is fallen in an age where in the Sagacity of Mankind seems to be at an ebb) that seeing it carries Profit in its Front, and (of all likelihood) will perform more than it promises, it may find Acceptance.

C H A

C H A P. I.

Of the Commodities of Great-Britain, and all other Countries, by which a mutual Trade is maintained; and of several Coins, Weights, and Measures, necessary to be known by all Merchants.

Great-Britain, containing the Kingdoms of England, and Scotland, and Dominion of Wales, is in it self very fertile by Nature, and its Fertility has been wonderfully improved within the Revolution of a few Ages by Art and Industry, to that degree, that it gives no place to the most fruitful Countries of the remaining Part of the World, and sends its Manufactures into the remotest Parts of the World, commanding by them the Riches of *Persia, Egypt, Aethiopia*, and both the *Indies*; and indeed, the Growth, and Manufactures of all the Earth's large Quarters, or Divisions; and is with good Cause therefore termed the Store-House of the Western World. The Commodities are,

Bays, Says, Serges, Cottons, Woollen-Cloaths made in divers Counties of sundry Goodnesses and Prices, Kersies, Buffins, Moccadoes, Sattins, Programms, Velvets, Plushes, Callimancoes, Worstedes, Fustians, Durances, Perpetuanoes, Tukes, Furs, Calve-skins, Sheep-skins, Hides, Paper, Armas, Cloth of Gold, Tin, Iron, Lead, Syder, Beer, Ale, Oats, Barley, Wheat, Pease, Rye, Linen-Cloth, Fish, Cheese, Butter, Gun-Powder, Hops,

Honey, Wax, Salt-petre, Yarn, Hemp, Flax, Saffron, Liquorice, Alom, Coperas, and many other Things of the like Nature.

The Coin current in *England*, and Dominion of *Wales*, is of divers Species; of which, and their Value, few being ignorant, I need not name them; But Accompts are kept in Pounds, Shillings, Pence, and Farthings; of which

4 Farthings	} make 1	{ Penny.	
12 Pence			{ Shilling.
20 Shillings			

In *Scotland*, Accompts are kept in Marks and Nobles, and Small Pieces; of which

1 Small Piece	} make	{ 2 d. 1 q <i>Englsh.</i>		
3 Small Pieces			{ 1 Nob. <i>Scot.</i> or 6d. $\frac{1}{4}$ <i>Eng.</i>	
2 Nobles <i>Scotch</i>				{ 1 Mark, or 13d. 2q. <i>Eng.</i>
3 Nobles <i>Scotch</i>				

Weights generally used in *Great-Britain*, are of Three sorts, *Troy*, *Apothecaries*, and *Averdupois*.

1st. *Troy Weight* is, that by which is weighed Bread, Gold, Silver, Pearl, &c. whose Denominations are, Pounds, Ounces, Penny-weights, and Grains; of which

24 Grains	} make 1	{ Penny-weight.		
20 Penny-weight			{ Ounce.	
12 Ounces				{ Pound <i>Troy</i> .
14 Ounces 12 p. wt.				

2^{dly}. *Apothecaries Weight*, used by Druggists and Apothecaries, whose Denominations are. Grains, Scruples, Drams, Ounces, and Pounds; of which

20 Grain

20 Grains	} make 1	{	Scruple.
3 Scruples			Dram.
8 Drams			Ounces.
12 Ounces			Pound.

3dly. *Averdupois Weight*, by which is weighed all sorts of Wares, or Merchandize Gatblable, as Sugar, Pepper, Cloves, &c. and all sorts of Commodities sold by the Hundred, as Currans, fresh Butter, Cheese, &c. and is divided into the Denominations of Tuns, Hundreds, Quarters, Pounds, Ounces, and Drams.

16 Drams	} make 1	{	Ounce.
16 Ounces			Pound.
28 Pound			Quarter of a Hundred.
4 Quarters or 112 Pound			Hundred Weight.
20 Hundred			Tun.

There are some other Denominations of these Weights in several Places, to wit, Stone, Cloves, Todds, Rowes, Weights, Loads, Forthers, Tuns; but they are all reduced into these Weights, and vary in several Countries.

Measures of Cloth, Linen, Silk, &c. are divided into Yards, or Ells, Quarters, and Nails; of which

4 Nails	} make 1	{	Quarter.
4 Quarters			Yard.
5 Quarters			Ell.

The Denomination by which larger Quantities, as Land, Board, Glass, Pavement, Tapestry, &c. are measured,

B. 4

measured, shall be given in another place, when we treat thereof.

Liquid Measures most in use, are Four, the Pint, the Quart, the Pottle, and the Gallon; of which

2 Pints	} make 1	{	Quart.
2 Quarts			Pottle.
2 Pottles			Gallon.

Other greater things being more properly Vessels to hold Liquor, than Measures of them, I shall give their Quantities when I come to treat of Gauging.

Dry Measure, used for Corn and Grain, is by the Gallon, which is neither the Wine Gallon, nor the Ale Gallon, but between them both; the common Name, and Measure of higher Measures, are thus:

2 Gallons	} make 1	{	Peck.
4 Pecks			Bushel.
8 Bushels			Quarter.
10 Quarters			Last.

Sea Coals and Salt are also measured by these Pecks, Five of which make a Bushel, and Thirty six such Bushels make a Chaldron of Coals.

Ireland.

THE Commodities of the Kingdom of *Ireland* are, Wool, Fells, Yarn, Furs, Flax, Linen Cloth, Hides, Tallow, Hemp, Honey, Wax, Herrings, Cod, Hake fish, Salmon, Eels, Rugs, Mantles, Irish Cloth, Pipe staves, Iron, and Lead, Wheat, and all kind of Grain, Salt, Beef, Butter, and Cheese, and many Manufactures.

The

The Money in which Accounts are kept, and compared with English, are Obs, Harpers, and Pounds Irish, of which

1 Ob	} make	{	4 d. 2 q. English.
2 Obs			1 Harper, or 9 d. English.
20 Harpers			1 Pound Ir. or 15 s. English.

France.

THE Commodities of the Kingdom of France, are Wines, Prunes, Canvass, Linen Cloth, Salt, Velvets, raw Silk, and divers Stuffs of Silk, Buckrams, Boxes with Combs, Paper, playing Cards, Glass, Grain to dye, Rozen, Wheat, and all kinds of Grain.

Accounts are kept here in Deniers, Sous, and Livres; or Deniers, Sous, and Crowns; of which

11 Deniers	} make	{	1 Sous
20 Sous			1 Frank or Livre, about 2 s. English.
3 Livres	} make	{	1 Crown, or about 6 s. English.
60 Sous			

In *Rochel* and *Bourdeaux*, and so in most Parts, the Kintal contains 100 lb. and holds out with our English Hundred, saying, that through falshood of the Weights it falleth less in one Place than another.

The long Measure is an Aulm, being almost a Yard longer than our English Ell.

The Measure for Salt in *Rochel*, is the Boiscav, whereof 24 make a Muy, 32 Muys a Hundred, and 2 Muys make about a Tun and 6 Bushels of our *Bristol* Measure; the best Measure of all is the Oldron, which is 36 Muys to the Hundred.

and every Hundred makes about 20 Tuns of our *Bristol Measure*.

The Measure for Corn at *Rochel* and *Bordeaux*, is the Boiseau, containing near about Three Pecks of *Bristol Measure*.

Spain and Portugal.

THE Commodities are, Wools, Madera, Sugar, Almonds, Wines, Oil, Aniseeds, Anchovies, Berberries, Bariglia, Figs, Raisins, Train-Oil, Iron, Oranges, Limons, Sumach, Saffron, Soap, Coriander, Cork, Liquorice, Woad. And the Commodities of the *West-Indies*, Sugar: Of *Brasil*, *Fernandebuch*, Wood, Tobacco, and other Commodities.

In *Spain*, Accompts are kept generally in Ducats, Ryals, and Mervedies; of which 34 Mervedies being worth 6 *d.* sterling make a Ryal, 11 Ryals make a Ducat, which is worth 5 *s.* 6 *d.* Sterling.

In *Portugal*, Accompts are kept in Ducats, Ryals, and Rees; of which 40 Rees, worth about 6 *d.* Sterling, make a Ryal, 10 Ryals a Ducat worth 5 *s.* Sterling.

In the most Parts of *Spain*, the Kintal contains 100 *lb.* and about 102 *lb.* of our English Weight. The Kintal of Iron in *Biskay* contains 150 *lb.* and makes 114 *lb.* English Weight. The Kintal of Pepper or Ginger, in *Lisbon*, called the Teller Kintal, contains 112 *lb.*

The Rore is the Quartern Weight, which contains 28 *lb.* and sometimes 2 or 3 Pounds more.

The Kintal of most sorts of all others Spices, contains 128 *lb.* and is called the great Kintal. The Rore, or Quartern thereof, contains 32 *lb.* It holds out about 15 or 16 *lb.* more than our English Hundred.

In *Spain*, the Measure is the *Vare*, which contains our English Yard, wanting a Nail.

In *Portugal*, Linen-Cloth is measured by the aforesaid *Vare*: But the other Measure is called the *Coruda*, and contains about Three quarters of our English Yard.

In *Spain*, the Measure for Corn and Salt is called the *Kayis*, containing 12 *Hanicks*; and 2 *Kayis* and 3 *Hanicks* make a *Tun* of Water-Measure at *Bristol*.

In *Portugal*, the Measure for Corn and Salt is call'd the *Muy*, and 60 *Alquers* make a *Muy*; and 2 *Muys* 15 *Alquers*, or thereabouts, make a *Tun* of our Water-measure at *Bristol*.

Italy, and Islands adjoining.

THE Commodities of *Italy*, and certain *Islands* adjoining, are, *Venice Gold*, *Velvets*, *Sattins*, *Cyprus*, *Silks*, *Cloth of Gold and Silver*, *Cottons*, *Fustians*, *Wines*, *Currans*, *Cloves*, *Rashes*, *Rice*, *Sarcenets*, *raw Silks*, *Aloms*, and *Vitriol*, *Glasses*, and other *Manufactures*.

Germany, and Places adjoining.

THE Commodities of *Germany*, and *Places* adjoining are, *Wools*, *Argol*, *Steel*, *Latten*, *Copper*, *Iron*, and all kind of *Manufacture* made of them: *Coperas*, *Aloms*, *Lead*, *Fustians*, *Paper*, *Linen-Cloth*, *Quicksilver*, *Bell-metal*, *Tin*, *Rhenish Wines*, and *Mather*.

Necessary Observations upon the Length and Weight of Cloths, and Sale of Goods.

Kent, Yorkshire, and Reading Cloaths are Six Quarters and a half broad, and ought to weigh 86 Pounds; and in length, the piece to be 30, and 34 Yards. Suffolk, Norfolk, and Essex Cloths, of Seven Quarters broad, ought to weigh 80 Pounds, and to be in length 29, and 32 yards. Worcester, Coventry, and Hereford Cloths ought to be Six Quarters and a half wide, and in weight 78 pounds, the length 30, and 33 Yards. Gloucester, Oxon, and Wiltshire Cloths, as likewise those of Somersetshire, ought to be Seven Quarters wide, and to weigh 76 Pounds, and in length to be 29, and 32 Yards. Suffolk Sorting-Cloths of Six Quarters and a half wide, ought to be 64 pounds in weight, and in length 24, and 26 Yards; and all other Cloths that are Six quarters and a half wide, ought to weigh 60 Pounds the Cloth or Piece, and to consist of 24, or 26 Yards in length. Broad and Narrow Yorkshire Cloths of Four Quarters wide, ought to weigh 30 Pounds, and to be in length 34, and 35 Yards. That called the Broad Cloth of Taunton, Dunstable, and Bridgewater, of Seven Quarters wide, ought to weigh 30 pounds, and in length to consist of 12 and 13 Yards. Kersies of Devonshire, and Dousons, of Four Quarters, ought to weigh 13 pounds, and to be in length 12 and 13 Yards. Checker'd Kersies, Greys, Strip'd and Plain, of Four Quarters, ought to be in weight 24 pounds, and in length 17 and 18 Yards. Ordinary Penitions, or Forests of Three Quarters and a half, ought

ought to weigh 28 pounds, and be in length 12, and 13 yards. Sortings, Penistons of Six quarters and a half, ought to be 35 pounds in weight, and in length 13, and 14 yards. Washers of *Lancashire*, and other Cloths of that Country, ought to be in weight 17 pounds, and in length 17, and 18 yards. And this was instituted for the prevention of Frauds, that they might have their true Substance, and not be made slightly and sleight; and it is to be noted, That the Maker or Vender is obliged to allow it, if there be a defect in breadth, width, or length; and if he refuse it, he may be Sued, and Damage recovered for a Fraud, contrary to the Intent or true Meaning of your Bargain: And that this may be perfected, there is a certain weight of Wool allowed for the Performance. As a Sack of Wool does contain 364 pounds, the Tod in like manner is 38 pounds, of which 13 are accounted the Sack, each Tod being Four Nails, and every Nail Seven Pounds; so that from hence it is concluded, as indeed it is allowed, that a Sack of Wool is sufficient, and ought to finish Four Standard Cloths, to render them true breadth, true weight, and true length, viz. Six quarters and a half wide, 60 pounds in weight, and 24 yards in length. And the next Thing, for the Information of the Buyer, is to see whether the Cloths he buys are well Mill'd and Dried, and that for Shrinking or Wast, he be allowed an Inch in every Yard. And thus having spoken of these Things, to give an Insight more perfectly perhaps than many yet understand, I proceed to other Things worthy of Note.

Some-

*Something Useful to know about Tale
of GOODS.*

Canvas-Cloath, 120 Ells is accounted an Hundred.

Russian, 14 Ells is a Chief; but of fine Linen, Silk, and Syndon, 10 Ells make a Chief.

Fish, as Ling, Haberdine, and Cod-fish, 124 is an Hundred; 1240 make a Thousand. Eels 25 to a Strike, 10 Strike to the Bind. Herrings and Stock-fish, 120 to the Hundred; 1200 make a Thousand in a Barrel, 12 Barrels make a Last.

Laths, there must be but Fivescore to the Hundred, of Five Foot long; but Four Foot long, are Sixscore, or 120 to the Bundle: Their Breadth One Inch and an Half, Half an Inch thick.

There are 120 Deals and Nails to the Hundred, Four thousand Six Inches Tree-Nails, (being made for Ship-pins,) Three thousand Nine Inches, Two thousand a Foot, Fifteen hundred Eighteen Inches, One thousand Two Foot Three-Nails, or Ship-pins, go to the Thousand, and there's a Load of Timber in them.

Lime is sold by the Bag in London, which should be a Bushel; 25 make a Hundred. In the Country it is sold by the Load, which is about Forty Bushel.

Hoops are sold by the Bundle, as 70 Pipe Hoops, 90 Hogshead, 120 Barrel, or Kilderkin, 180 Pink, or Firkin Hoops, make a Hundred.

Skins, as Goat, are numbred by the Kipp, of Fifty Skins to the Kipp; Other Skins, Fivescore to the Hundred.

Furs, as Sables, Filches, Minks, Martins, Greys, and Jennets, Forty Skins make a Timber.

Glass, a Seam is 24 Stone, or 120 lb. New Castle-Glass, 5 Foot make a Table, 45 Tables make a Case.

Cafe. *Normandy* Glass, 25 Tables is a Cafe ; which is cut into long Squares, the other Diamond-fashion. Glass-Bottles, 21 to the Dozen ; 2 such Dozen, or 252 make a Gross, which is a Day's Work.

Paper, a Bale is Ten Ream, a Ream Twenty Quire, Twenty four Sheets in a Quire ; in *Genoa*-Paper, Twenty five Sheets in a Quire.

Parchment, a Roll is Five Dozen, Twelve Skins Dozen.

Hides, Ten make a Dicker, Twenty, Dicker a Last.

Gloves, Ten Pair is a Dicker : Horse shoes the same.

CH A P. III.

Things to be consider'd in Weighing and Taking up Goods. Of Marking, Tare, and Tret, what they are. And of making Bills of Parcels. With many other Things appertaining to Trade, &c.

THERE are several things to be consider'd, though a Trader may not very often be concerned in them : But before I come to Particulars, I shall give these general Directions, which ought to be observed.

The Marks of Goods are many, and those very different, either in Letters or Cyphers, at the Discretion of the Party ; though some, to put a gloss upon their own Goods, have marked them with another Man's Mark ; of the Disadvantage of which they have been frequently made sensible, by their Mis carriage, or mistaken Delivery.

The

The Number most proper to Casks thus, No 1, and so onward to as many as there are of them, or to what number suffices, whereby they are distinguished from one another, that if there be a defect in any of them, it may be known from whence it came, and so reparation had; or if there be a distrust of the Weight or Measure, it may without much Trouble or Difficulty be singled from amongst the rest to decide that Scruple. Neither is this all; but you ought to observe the Tare of the Cask, or Pack.

Tare signifies the weight of the Cask, Pack, Chest, &c. and relates only to such Things as are bought by Weight; for it may altogether be accounted unreasonable, that the Buyer should pay the same Value for the Cask, as for the Goods, when frequently they are Ten times the Value; so that according to Custom of Trade, there is an Abatement for the Weight in Tare; sometimes as the Mark is set upon the Cask, or Wrapping upon Packing, and sometimes by weight after the Goods are taken out; and that which is marked upon the Cask, or Pack, &c. is called the Invoice Tare, signifying that the Weight has been considered before the Goods were put up; and those that are not so marked, are either by Estimation or Weight, after the Goods are taken out, considered: And divers there are that are held at a certain Estimate, especially Tobacco; for according to the Hundred Weight, so the Hoghead is reckoned. As for Example: Suppose you have Seven Hogheads, or the like of any Commodity by Weight.

Having set down your Weight before you part from the Scale, call them over with the Party that weighs them against you, by Comparison, or Equality of setting down; compare likewise your Draughts, and if any Difficulty arise, take care for

to manage it, that it be adjusted before you part, by giving your self, rather than fail, the Trouble of weighing it over again. And thus you will not only clear your Assertion, but be satisfied you have your Weight; and to know the better the exact Method, observe the following Rule.

	C.	q.	l.	Tare	C.	q.	l.
1	4	3	17	—	0	2	14
2	6	2	14	—	0	3	27
3	6	3	17	—	0	2	16
4	8	1	21	—	0	3	15
5	7	3	14	—	0	3	22
6	5	2	19	—	0	3	27
7	4	3	17	—	0	3	21

There is moreover a Distinction in weighing between what we call Neat Weight, and that which is called Gross or Suttle; for between Gross and Neat, is an Allowance for Tare, as likewise Loss and Damage, the Draughts being likewise considered, and comprehended, (a Pound in that case being allowed to every Hundred.) The difference between the Suttle Hundred and the Gross Hundred, is Twelve Pounds; the first being accounted only Fivescore; and the latter Fivescore and Twelve Pounds, and is called the Great Hundred, as the other is the Small Hundred.

C. q. l.

First, set down the Summ— 63—3—20

Secondly, set down 4 under C— 4—

Thirdly, draw a Line, and Multiply } 255
the 63 by 4, and taking in the odd } 28
Quarters. } 2040

Fourthly,

Fourthly, Put down 28, and Multiply } 512
 by that, adding the Pounds — } 7160

To Freemen of *London* there is likewise an Allowance call'd *Tret*, which is Four Pounds in 104, given, through Custom, by the Seller, unless the Bargain be made to the contrary, and no *Tret* be to be allowed, by reason of the Cheapness of your Agreement.

To find the *Tret*, having subtracted the Tare from the Gross, bring the Remainder into Pounds Suttle; which divide by 26, and the Quotient is the *Tret* to be allowed in the whole; which subduct from the Pounds Suttle, and the Remainder is the Neat or Clear Weight.

And forasmuch as you must ever observe to Book your Bill of Parcels as soon as you have taken it, and send the Paper along with the Goods, I have thought it convenient to set down the Form of a Bill; in Imitation of which, any other of the like kind may be made, &c.

It often happens, that when Goods are sold for Time, the Seller being in necessity for Money, will give the Buyer an Allowance, if he will pay present Money; which Abatement is called *Discount*, and is generally after the Rate of 6, 8, or 10 per Cent. per Annum, as can be agreed, and is thus understood and calculated. Suppose *A* is to receive of *B* 200 l. six Months hence; *B* offers to pay *A* presently, if he will Discount at 6 per Cent. per Annum. *A* condescends, and they agree. Now to know what *A* must allow *B* for Discount,, do thus: First, reduce your 200 l. into Pence the

the Product will be 48000 Pence, then multiply those Pence by 6, the number of Months to be discounted for, the Product will be 288000, which divide by 200, and the quantity of time that is to be allowed, both which make 206 for your Divisor, the Quotient will be $1398 \frac{6}{103}$ Pence, which is 116 s. $\frac{6}{103}$ parts of a Penny, and so much must be abated out of the Two, for the Six Months Discount, and no more, according to the true Method received among Merchants.

C H A P. IV.

Directions for Entering at the Custom-House, and Shipping of Goods, and what ought to be considered in Exporting or Importing Commodities, with the Form of Receipts, and Bills of Lading, Brokerage, and what it is, &c.

IF you design to Ship any Goods, or the like, that you may not be at a Loss to know what you must do in that case, take the following Directions, &c.

Having packed up your Goods in order to be Shipped and sent away; or if Goods that pay Custom, &c. if they are to be received, carry to the Custom-House the true Contents of the said Goods, and get them entered according to the usual manner; for by reason of the Variation of their Method, no certain Rule of Direction can be particularly given; yet giving the Contents of your Goods to one of the Clerks, there is such care taken, that you shall be dispatched in your turn, and

and having found out the first, he will direct you to the next, and so in course till you have the Commissioners or Farmers Hands with the Seal of the Office ; and for this no Clerk will venture to take above his just Fees ; for if he be found so doing, Redress is to be had upon the least Complaint to the Commissioners, or Farmers. The Coquet obtain'd, which is a piece of Parchment, certifying the Payment of the Customs, and all the Duties for the Goods mentioned, you have no more to do but to mark them, and set down their Number on the back side of your Coquet, mentioning the true Contents ; and so with his Fee deliver it to the head Searcher, and nothing else remains but the Payment of Wharfage, and Portorage, &c. but if you send them on Board, it will be requisite to have a Note from the Master, the Mate, or the Purser, that they are safely shipped ; and this Note moreover must specify the Marks and Number, and may be thus :

Received, the Eighth of December, 1700. on Board the Good Ship the Anne, bound, by the Blessing of God, to Smyrna, Eight Bales marked, and numbred, 4 viz. N^o 1, 2, 3, 5, 9, 10, 13, 16, per me

John Williamson, Master, &c.

And when you have this Note, you must go to the Master, and upon shewing him it, procure him to sign you a Bill of Lading, which is an Acknowledgement of the Goods, promising safely to deliver them at the Place required, though with some Exception, in case of Casualty ; the Form of which runs thus :

The

The Form of a Bill of Lading.

SHipped, by the Grace of God, in good Order, and well Conditioned, by you James Willis, in and upon the good Ship called the Eagle, whereof is Master under God, for this present Voyage, James Williamson at Blackwall, and by God's Grace bound for Smyrna; that is to say, Eight
 4 1, &c. Bales of Scruffs, being mark'd and number'd as in the Margin, and are to be delivered in like good Order, and well Conditioned, at the aforesaid Port of Smyrna, (the Danger of the Sea, Pirates, &c. only excepted,) unto Mr. Thomas Tuel, or to his Assigns, he, or they, paying Freight for the said Goods Two hundred Pounds; with Primage and Average accustomed. In witness whereof, I James Williamson, Master of the aforesaid good Ship the Eagle, have affirmed Three Bills of Lading, all of this Tenor and Date; the one of which Three being accomplished, the other Two to stand void. So God send the good Ship to her desired Port in Safety. Amen.

Dated Decemb. the 8th.
 1695, at Lond. &c.

James Williamson.

And by this Means you are sure to have your Goods safe delivered, or have Satisfaction made you in case of defect.

But for Goods that come into the Nation, you must, as near as you can, by your Letters, and Factories, guess at what quantity of Goods you have, and then go to the Custom-House, and carry Money; and when you have found the first Clerk, he will, as before, send you from Man to Man, un-

ill you have accomplish'd your Business; and having paid your Money in the Morning, if you go to the Ship in the Afternoon, you will find there a Warrant for the delivering your Goods unto you.

Bills of Exchange, what they are, together with their Power and Efficacy; the manner of Drawing them, and Managing them to the best Advantage in the Way of Trade.

Seeing there are but few Traders that deal any thing considerable, altogether freed from Receiving or Paying, at one time or other, Bills of Exchange; and for that the Manner and Method to be observed therein, is not altogether common, I have thought it convenient to give the best Directions for the Security of the Person that draws the Bill, he that pays it, and he that receives it: And of these in their Order.

As for a Bill of Exchange, by long Custom, and his Conveniencies that accrue thereby, it is at that Day held to be so excellent a Specialty, that it carries along with it, as it were, a commanding Power, being taken notice of, and, for the most part, satisfied with such Exactness, that nothing can be more, though drawn by a Factor, or Servant, upon the greatest of Traders. For, upon the Payment thereof depends, in a manner, the Credit of him that draws it, and him upon whom it is drawn. By reason of Non-payment, a Protest is made; which, in a short time, being at least whisper'd

whisper'd abroad, makes others cautious how for the future they deal with those Men, and puts the former likewise to Charges, by having the Protest returned with his Bill, &c. And of these Bills there are two sorts, though sending to one and the same purpose, (*viz*) Out-land, and In-land Bills. As for the first sort, they are drawn upon Merchants, Bankers, &c. living in Transmarine Parts; the second, upon Merchants, Bankers, or Dealers in the same Country, tho' distant from each other; and are drawn upon Sale of Lands, Bargains, Traffick and many other Occasions, requiring the Returns of Money, but are in Weight alike in due observance.

As to an Exchange, Four, Three, or Two Persons may be reasonably concerned, (*viz*) Two at the Place where the Money is taken up, and Two where it is payable; as thus, First, the Person that delivers: Secondly, he that receives: Thirdly, he who is to take the Money: And lastly the Person upon whom the Bill is drawn. Or, in case of Three Persons, thus: First, the taker: Secondly, the deliverer: And Thirdly, the Person on whom the Bill is drawn. If Two Persons then First, the drawer; and Secondly, the Person on whom it is drawn: the former ordering the Bill payable to himself, or, &c.

There is likewise another sort of Exchange, and that is called a dry Exchange; and this is only to evade the Statute of Extortion, and is thus managed: If a Person has present Occasion for a Sum of Money, he repairs to a Banker, and there is furnished upon giving a Bill of Exchange to repay it at *Amsterdam*; but the Bill becoming due and no such Payment made; for indeed he who draws the Bill has no Correspondent in the Place mentioned, to receive it, a Protest comes over with the Bill, and so the Money is paid to the Drawer with Costs. And much to the same

urpose, is another way, called the Feigned Exchange; but that not being to my purpose, I shall omit it, and come to what is more useful in way of Trade.

As for the Payer, it is nothing more than reducing Foreign Coin to an English Value. I have already mentioned it; and for the Form of an English Bill of Exchange, it is thus, if In-land.

aus Deo. In London this 30th of November, 1756. For Fifty Pound Sterling.

AT Six Days, Sight pay this my First Bill of Exchange to Mr James Turner, or his Assigns, Fifty Pound Sterling; for the Value here received of Mr. Richard Wadsworth, and put it to Account, as Advice.

Your Loving Friend,

to Mr. Samuel Arnold,
Mercer, d. d. Pma.
in York.

George Wilmot.

If it be an Out-land Bill, it differs only in Place, and very seldom in the Form; however, you must expect to have a Letter, signifying that such a Bill is drawn upon you, expressing the Contents, and upon what Account, which is commonly called Letter of Advice, and is to prevent any Person's charging a Bill upon you, and the Letter is frequently sent before, though sometimes with the Bill inclosed in it, when there is no scruple in the fidelity of the Taker, or Party to whom the Bill is directed. And if a second Bill come, then you must have it superscribed, (*viz.*) my first Bill not being paid, pay this my Second Bill, &c. and so

to the Third : And if he that underwrites the Bill, makes himself Debtor, then must it be expressed, (*viz.*) and put it to my Account ; but if he ought to pay it, then he must write, put it to your Account.

The Form of an Out-landish Bill in English thus, &c.

Laus Deo. In London, this 30th. of November, 1706. For 100 l. at 36 s. 8 d. Flemish, per Pound.

AT Usance, pay this my first Bill of Exchange to Van Dou'os Legar, Merchant, or Order, One hundred Pounds Sterling, at Thirty six Shillings Eight Pence Flemish, per Pound, for the Value here received of Mr. George Thomas; and put it to Account, as by Advice.

Your Loving Friend,

To Mr. William Wallis,
Merchant, d d. Pma.
in Rotterdam.

James Mellior.

And so the Second, or Third, at double or treble Usance, if the first be not paid ; or, if it be paid, if there be more upon the Accompt, or your Credit is Good, the like may be specified.

If it so happen that any Bill be negotiated by Exchange, or the Money taken in, and so to be Assigned over to another Man, then the Assignment must be written on the backside of the Bill in this manner, (*viz.*)

Pay the Contents on the other side hereof, to Mr. Gabriel Keeling, or Assigns, for the Value receiv'd of

T

Mr. William Wills. London 30th November, 1706.
William Sims.

And if it so happen, that *Gabriel Keeling* does likewise assign the same Bill for his Account, then it is requisite to write it only thus, (*viz.*)
Pay the Contents hereof to Mr. James Cole.

And in the like manner upon all Bills; as for the time given, it differs according to the Distance of Place, and for the most part, either depends upon the Pleasure of the Drawer, or as he can agree with him that is to take or receive it; and sometimes the badness of the Season is considered; that so it being long kept from the Party's Hands who is to pay it, he may not be surpris'd by a Bill's coming to him just as it grows due.

CH A P. VI.

Things very proper and material to be observed, relating to Bills of Exchange, whereby all Parties may not only understand what is to be done on that Occasion, but do it with Ease and Safety, &c.

LET the Dealers care be to take a *Memorandum* in a Book of the Person's Abroad, who presents the Bill, and keep Copies of those he sends to get accepted, and make the Directions of Bills on the Inside, that so by knowing the Place, his trouble may be the less, ever excepting against the second Bill, the first not being satisfied, and by his making Copies sent to be accepted, he may know how Exchanges (if his Talent lie that way) go in

all Places, and without trouble know the day he is to call for his Money, and upon whom. But to come to things more material to be observed, &c.

1. If a Bill, after Acceptance, be protested, it does not in the least clear the Party who was faulty in Non-payment, but makes him liable to pay the Charges, &c. tho' the Drawer is not excused, but liable to see the Bill satisfied.

2. It is not safe for any Person to make a Bill payable to the Bearer, lest happening to be lost, or to miscarry, it should be paid to the wrong Party; for if in this case it so happen, the Person who paid it is not liable to a second Payment.

3. If a Bill happen to be drawn on Two Persons, and but one of them accept it, and they are jointly concerned in it, you ought to protest notwithstanding, if the other refuse to accept it.

4. If a Bill upon being presented, be only accepted by Word of Mouth, and the Party afterward refuses to subscribe it, yet if it be left in his hands, the Acceptances is held sufficient.

5. If a Bill happens to be accepted for part, and not for the whole, then may the Person who proposes it, give an Acquittance for so much Money, yet must he enter Protest for the Non-payment of the rest, and send it away.

6. *Note*, That the Person who draws the Bill is Master of it till it becomes due, and may send it any time before then to countermand it, or not to pay it till farther Order; which Order must be made and passed before a Publick Notary, and notified to the Party who has accepted the Bill, but it must be before the Payment, or it is invalid.

7. If a Bill be drawn upon a Party out of Town, he not being at home, his Wife, or Servants, are not bound to accept it, unless he has by a Warrant of Attorney empower'd them so to do; yet, if they please, for the Credit of the Merchant, or

Drawer

Drawer, they may do it, yet Protest must be made against the Party on whom it was drawn, for Non-acceptance; and note, that all Bills where there is a Defect in Payment, must be protested Three Days after they become due.

8 If a Bill accepted be lost, then must he who brought it demand a Note of the Party's Hand and Seal who received the said Bill for the Payment of the Money, at the Day specified in the Bill, upon a Second Bill, if it come to hand; or for want of it, upon the Note it self; and if a Note be refused, Protest must be entered and sent away; and when the Money becomes due upon the second Bill, it must be demanded, and a second Protest as the former for Non-payment, &c.

9. If any Party happen to die between the time of Acceptance, and the Bill's becoming due, then must he who was to receive the Money, go to the Place of his Abode, and demand it, when due, of the Executors; and if Payment be refused, he must Protest as if the Party were living; and on the contrary, if it so happen that the Party to whom it was payable die before the Bill is due, then ought it to be demanded upon Security, to save the Payer harmless, though no Will be proved, or Administration taken out, and Protest made upon Refusal.

10. If it so happen, That a Bill be made payable to any one Person exactly, and absolutely by name; then cannot he assign it over to another; for if so, he that pays it to his Assigns, pays it to the wrong Party, and may be liable to pay it a second time, &c. These and many the like Rules are to be observed in this way of Dealing, and indeed are very necessary to be known by all Traders.

C H A P. VII.

Excellent Directions for Shop-keepers and Tradesmen, to keep their Books of Accounts by a Method more accurate than ever yet Published for their Use.

THE Exact keeping of Books of Accompts being the chief Thing and Hinge on which Trade turns, and by which Commerce is held, it is of absolute necessity that the Merchant, Shop-keeper, or Tradesmen should be knowing therein. Several have proposed large Methods of Accounts for Merchants, and others of great Trading; but my Business being only to instruct lesser Traders and Shop-keepers, I do esteem it of great Importance to contract all Affairs, relating to Accompts, into as little Compass as may be, whereby both Confusion and unnecessary Expence of Time may be avoided; in doing which, nevertheless, I shall propose the Exactness of the *Italian* way of Book-keeping without its Intricacy, and avoid the Confusion of Shop-keepers common Method, and yet retain their Plainness.

Shop-keepers, and others of small Trades, keep their Accompts in these Books; to wit, A Book for Goods bought, another for Goods sold, a Cash-Book, and a Ledger. Which Books, if ordered according to the following Directions, they will find the Benefit thereof, beyond their confused and common Method,

1. To order the Book for Goods bought, having it Ruled as is common, number or page every side from the beginning to the end with the numeral Figures, 1, 2, 3, 4, 5, &c. and write the Particulars

Particulars of every Parcel of the Goods bought within the Lines, drawing out into the Money Columns the Total only, and between every Parcel draw a Line of Separation.

2. Where the Paging of that Book ends, begin to page for Goods sold, after the same manner to the end, 6, 7, 8, 9, &c This Book being Ruled also, as is common, with a Margent and Money-Columns, write the Particulars of every Parcel of Goods sold within the Lines, drawing out into the Money-Column the Total only, and between every Parcel draw a Line of Separation.

3. The Cash-Book must be ordered thus: The Ruling as is common for a Leidger, with a Margent, a Column within the Money-Column, and the Money-Column; then to number, begin at the Left Hand Page, making that and its Right Hand Page one Folio, and with such a Number as follows the last of the Selling-Book, from that Number all the Folio's following to the end: In this Book is wrote all the Money received on the Left-Hand side or Debtor, and all the Money paid on the Right Hand side or Creditor.

4. The Leidger being ruled as the Cash Book, where the numbring of that ends begin this, and Folio it throughout. This Book presently shews how matters stand between the Shop-keeper and his Creditor, or between his Debtors and himself, and how it stands in relation to Profit or Loss. Having prepared your Books thus, I come now to give you the Description of an Account: Every Account implies a Debtor and a Creditor; the Debtor is the Person owing, or thing from which somewhat is due; the Creditor is the Person or thing to whom that Due belongs; or thus it is, the taking away from one, to put or place to another, for there is nothing done in the way of Commerce or Dealing between Man and Man, but

it is the Charging of the one Debtor, to the Discharging of another Creditor; so that where there is a Debtor, there must be of necessity a Creditor. From these Considerations follow the Aphorisms following.

1. At the beginning of Trade, whatsoever a Man hath is Debtor to Stock.

2. Stock is a Debtor to whomsoever a Man oweth.

3. In continuance of Trade, when Goods are bought for time, the Account of Goods is Debtor, and the Selling Man is Creditor.

4. When Goods are bought for Ready Money, the Account of Goods bought is Debtor, and Cash for the Money paid is Creditor.

5. When Goods are sold for time, the Buying Man is Debtor, and the Goods Sold are Creditor.

6. When Goods are sold for Ready Money, Cash is Debtor, and the Goods are Creditor.

7. When Money is received of any, make the Accounts of Cash Debtor, and the Paying Man Creditor.

8. Which Money is paid to any, make the Receiver Debtor, and the Accompts of Cash Creditor.

9. When any Loss happens, by Goods or Persons, any where, make the Accompt of Profit and Loss Debtor, and the Goods or Men by whom the Loss arises Creditor.

10. The contrary when any Gain happens.

11. In Balancing any Accompt, if the Debtor or Left-hand side exceed the Creditor, then the Accompt is Creditor by Balance. But if the Creditor or Right-hand side exceed, then the Accompt is Debtor to Balance.

Observe, That the Book for Buying, and Book for Selling Goods, constitute but one Accompt.

compt together; the Paying Book being for the Debtor's side of the Accompt, and the Selling Book for the Creditor's side. Having thus given the Ground-work of the Method intended to keep your Accompts, I shall now shew the Application.

Knowing by the foregoing Directions who or what is Debtor, and who or what is Creditor, turn to the Accompt to which the Debtor belongs, or if none, open one in your Leidger, and to the Left Hand of the Account write to whom, or what the Debtor belongs, expressing the Reason of the Entrance in as few Words as may be, writing the Day of the Month in the Margin, the Summ in the Money Column, and in the Column within the Page or Folio, where its Creditor is entered. This being done, turn to the Accompt to which the Creditor's belongs, and on the Right Hand side, write by what or whom the Creditor arises, expressing also there, as before, the Reason of the Entrance, and in the Column within the Money Column, the Page or Folio where its Debtor is entered. And it is farther to be observed, that the Buying Book, Selling Book, and Cash Book, are the Ground-work of that which is here called the Leidger, and on which that depends: But all these Books taken together, constitute and make that one Leidger of Merchants on which all Accompts depend, so upon one another, that every Creditor has a Debtor, and the contrary; wherefore all the Creditors taken together, must be equal to all the Debtors taken together.

It is the Custom of some, yearly to cast up their Shop and Accompts, to see how Affairs stand with them, which by Accomptants is called Balancing of Books; and here the Excellency of the Method here delivered shews it self; which do after this manner.

Having Ruled a Sheet of Paper, and wrote on the Left Hand side Balance Debtor, and on the Right Hand side Balance Creditor, run over every Account, beginning with the Buying Book, and write the Total Summ of all the Accompts on the Debtor's side of your Balance; then cast up the whole Total Summ of your Selling-Book, and write that on the Creditor's side of your Balance: In your Cash Book cast up both Debtor and Creditor, and substra^{ct} one from the other; which done, if the Debtor's side exceed, write the Difference to the Creditor of Balance, if the Creditor's side to the Debtor of the Balance: Run over all the particular Accompts in the Leidger in like manner, always writing the Excess, if the Debtor's side exceed, to the Creditor; if the Creditor's side, to the Debtor of Balance; which done, cast up Debtor and Creditor side of your Balance: If their Total Summ are equal, then assure your self your Accompts are all rightly stated and in order; if not, there is some Error or other, either Summs miscast, or misplaced, or a Debtor without its correspondent Creditor, or something else of the like kind; which to find out, must be your utmost Care and Diligence; for the Error, if not rectified, may make your Books intricate for ever after; if therefore you cannot presently call to mind your Error, you must prick over all your Accompts anew.

If your Books are out, or that you are going a Journey, or for any other Cause have a mind to settle your Books, then by the help of the aforesaid Balance proceed thus,

First cast up all the Goods you have upon your Hands at a Marketable rate, the Summ whereof write in a Parcel in the Selling-Book, upon an Account in your Leidger, which intitle Goods unsold: Then after this new Addition substra^{ct} the Summ

Summ Total of the Buying Book and Selling one from the other ; if the Sum of the Buying Book exceed, you have lost in Trade so much as the Excess, which carry to Debtor of Profit and Loss ; if the Selling Book exceed, you have gained so much as is the Excess, which write to the Creditor of Profit and Loss ; the like do with every Accompt on which Gain or Loss arises ; which done, cast up the Debtor and Creditor's side, of the said Accompt of Profit and Loss ; which will shew the increase and decrease of your Estate ; if Loss carry it to the Creditor of the Stock Accompt, if Gain to the Debtor ; having then drawn another Balance, which call the final Balance, that will shew how your Affairs stand, from which you must begin your new Books or fresh Accompts, observing this always, that the Debtor's side of your Balance in your Old Book, must be Creditor in your New Book, and the contrary.

C H A P. VII.

Law-Instructions, how the speediest and easiest way to sue for, and recover good or bad Debts, with little Charge and Trouble, &c. if recoverable, &c.

Considering there are no Dealers in what way soever, especially if any that is considerable, must give Credit, and in that let them be never so cautious, at some time or other bad Debts will arise, or such Controversies upon Accompt happen, that they are irreconcilable but by Law ; my purpose now is to give the best and easiest Directions how to recover and get in Debts that

that appear desperate, and that in the briefest manner and method, considering that to come to Particulars in relation to Charges, &c. would be too tedious, &c.

If the Person live in the City, and the Debt exceed Forty Shillings, you may enter an Action against him at any of the Compters, and by attaching his Person, oblige him to give Bail; the Officer, when he has Arrested him being bound to take such Security as may sufficiently answer or be accountable for the Debt and Charges; and thereupon you must see your Attorney, and declare against the Person in order to Tryal; you may do the like if he be in Prison: But if the Officer has taken his Word, or he be in a Spunging-House, you cannot declare unless you go to Trial by consent, though upon Complaint you may oblige the Officer to render his Body to Prison, or see Bail given in; and if the Party make his Escape after he is Arrested, your Action lies against the Sheriff for your Debt, &c.

You may likewise bring a Writ of *Queen's Bench*, or *Common-Pleas*, and getting a Warrant made out upon either of them, attach the Party, and thereby oblige him to give Bail to the Sheriff, and afterward before a Judge; and if the Bail be defective, you may except against it, being only taken conditionally, and so oblige the Defendant to swear his Bail in Court, especially if you fear his going off, or the Debt be considerable.

A Writ of *Exchequer* likewise lies in London and other Places, either by way of *Subpœna*, which any Person may serve that is not an Officer, though it hold not to Bail, or a *Quo minus*, which will do it; and upon these you may proceed to Trial, as upon the former. And all Debts arising and becoming due in London, being to be tried there, unless the Avenue, upon a more than ordinary suggestion,

gession, be removed. And here a Female Covert trading for her self, out of her Husband's Way or Calling, her Husband being a Freeman, may be Arrested and Impleaded, as if she were a Maid or Widow.

If a Person abscond and absent himself from his Business, so that he cannot be taken, and consequently not Impleaded, you may file a Writ against him, which passing through the Philizers-Office, and so through the Petty-Bag, and Exigent. after a due return, that the Man is not to be found, and Proclamation made, you may take out *Capias ut Legatum*, and seize in Execution Body and Goods, as if there had been a Judgment obtain'd against him upon Verdict, though it is in his Power by moving the Court and paying Costs, to reverse it, and so come to a fair hearing, &c.

There is another way by Attaching of Goods or Moneys within the said City or Liberties being in the Hands of a second Person; and being so Attached, you may proceed to condemn them in Court with Costs, unless upon Notice the Party who owes you the Moneys, and whose properly they are till condemned, dissolves your Attachment, by putting in Bail, to answer your Plaint, &c.

There is likewise, to save Charges, and for the Ease of the Poorer sort, established in London a Court of Equity, vulgarly called the Court of Conscience, which between Freeman and Freeman, take Cognizance of any Summ under Forty Shillings; and the Commissioners, who are substantial Citizens, appointed by the Lord Mayor, &c. to inquire into petty Differences arising between Man and Man, have Power to stay any Sute begun in either of the Sheriffs Courts, Mayor's-Courts, &c. if the Debt originally exceed not One Pound Nineteen Shillings and Eleven Pence, obliging the Plaintiff

Plaintiff upon Penalty of Five Pounds, according to a Statute made in the 1 of King *James I.* to bring it to a hearing before them; and in this Court the Proceeding is by Summons, and the Party to whom the Debt is owing, is believed upon his Corporal Oath, unless the Commissioners, knowing him to be very notorious, or by Proof it so appear, will not suffer him to swear; and when the Debt is sworn, if the Defendant pleads Poverty, time is awarded by the Court for the Payment of it by the Week or Month, at the Dwelling House of the Plaintiff, or where he shall appoint; and upon a failure Attachment is made out against him, to take him in Execution, and served by an Officer for that purpose.

If the Person that owes you Money be no Starter, it is usual to enter an Action against him, and letting him know you have done so, requiring him to give in Bail to it, that so you may go to Trial by consent; but if he refuse it, you must send an Officer to oblige him to it. And thus much briefly to give a Light into what is to be done in getting in bad Debts, &c.

The Methods observed in Compounding Debts, and what ought to be observed therein; the way of proceeding upon a Commission of Bankrupt, and what it is; together with the Form of Writing, seasonable on that Occasion, &c.

If a Person absent himself from his Business under a failure in the World, and will not appear to negotiate with his Creditors for Time or Abatement, but does it by Proxy, appointing a Place for the general Meeting of the said Creditors to hear Propositions made to them, which are usually these, *viz.* To pay so much in the Pound, which is called Compounding: To pay in Goods as they first cost or to give Security upon Time. In this Case the Creditors ought to consider whether their Debtor is really necessitated to betake him to this Shift, or whether he does it out of Policy to shift himself of a bad Bargain, or keep other Mens Monies in his Hands, &c. and accordingly to take their Measures; for if the former, they ought to take the first Offer, for seldom comes better; a Man continually losing himself by being restrained from his Business, and consequently his Affairs must run to ruin; but if it be out of a Knavish Design to defraud his Creditors and enrich himself, a Practice too frequently used; there is a way to ferret him out of his secret Abode, which is by taking out a Statute of Bankrupt against him, which in brief is this:

There

There is a Commission obtained from under the Great Seal of *England*, nominating and directed to Five or more Persons appointed Commissioners, empowering them to make a strict and thorough Inquiry into the Party's Estate, and all the Particulars attending or depending thereon, giving them sufficient Authority to administer Oaths to any they suspect to be conniving or confederate with him in concealing, or carrying away any part of his Goods, or any thing appertaining to him; as also what Moneys are due from them to him upon Accompt, or whatever they shall conceive convenient in the like nature, and may lawfully break open such House, or Houses, where they are sufficiently informed such Goods are conveyed and concealed, and may imprison such as shall refuse to answer them any lawful Question, upon sufficient ground so to do; and may not only sell the Goods, but extend the Lands, or Estate, to the Advantage and Behoof of the Creditors, and cause a Distribution of the Moneys so obtained, to be made amongst those that have paid their *quota* in defraying of the Charges, allotting to each a Dividend according to the Summ he proves and makes out, be it more or less; and if it so happen, which is very seldom, that there be any Overplus, it must be returned to the first Proprietor, that is, the Party that was Bankrupted.

Note, That in taking out this Commission, sufficient Security must be given in to prove the Party a Bankrupt; nor is it taken out against any Man, unless one or more of the Creditors consent and joyn, and the Summs amount to upwards of 100 l.

As for the usual Rates of Composition, they are from Five to Fifteen Shillings in the Pound ready Money, or such Security as the Creditor shall accept; and in this case it must be acknowledged

as Satisfaction and a Release given in general discharge upon Payment, as if the whole had been paid. and fuller Satisfaction made; the Copy of which, for the better readiness, take as followeth.

The General Release.

K Now all Men by these Presents, That I *William Grey*, Citizen and Grocer of *London*, have Remised, Released, and quitted Claim, and by these Presents do for me, my Heirs, Executors, Administrators, and Assigns, Remise, Release, and for ever quit Claim unto *Richard Waldrow* of *Tork*, in the County of *Tork*, Merchant, his Heirs, Executors, Administrators, and Assigns all, and all manner of Actions, Suits, Causes, and Accounts, Dealing, and Dealings, Debts, Dues, Duties, Reckonings, Summ and Summs of Money, Controversies, Judgments, Extents, Executions, and Demands whatsoever, which I the said *William Grey* ever had, or which I, my Heirs, Executors, Administrators, and Assigns, or any of us in time to come, can, or may have to, for, or against the said *Richard Waldrow*, his Heirs, Executors, Administrators, or Assigns, for, or by any reason, matter, cause, or thing whatsoever, preceding the date hereof. *In witness whereof*, I have hereunto put my Hand and Seal the Fourteenth Day of *December*, in the Fifth Year of the Reign of our Sovereign Lady Queen *ANNE*, of *England*, *Scotland*, &c. and in the Year of our Lord God, 1706.

Signed, Sealed, and delivered in the Presence of
James Douison,
Charon Daux

Will. Grey ●

And

And the like Satisfaction must be acknowledged if you take the Goods in full ; but if you take part of the Goods or Money, and give time for the rest, then the best way is to take a Bond for what remains, and give him a Discharge in full, dated a Day or more before the Bond. As for the Form of the Bond, it may be thus, &c. if single.

The Form of a Latin Bond single.

Novernit Universi per presentes, me Richardum Waldrow, Eboraci, in Comitatu Eboracensi, Mercatorem, teneri & firmiter obligari Willielmo Gray, Londini, Armatico, in Centum Libris bonæ & Legalis Moneta Angliæ solvend. eidem Willielmo Gray, aut suo certo Attornato, Executoribus, Administratoribus, vel Assignatis suis, ad quam quidem solutionem, bene & fideliter faciendam, obligo me, Hæredes, Executores, & Administratores meos firmiter per presentes. Sigillo meo sigillat. vicefimo primo die Decembris, Anno Regni Reginae nostræ A N N Æ, Dei Gratia, Magnæ Britannia, Francia, & Hibernia, Quinto, Annoque Dom. 1706.

THE Condition of this Obligation is such That if the above-bounden Richard Waldrow, his Heirs, Executors, Administrators, or Assigns, shall well and truly pay or cause to be paid to the above-named William Gray, his Heirs, Executors, Administrators, or Assigns, the full Summ of Fifty Pounds of good and lawful Money of England, in and upon the Twenty first Day of December, next ensuing the Date hereof, without Fraud or further Delay, then this present Obligation to be void, and of none Effect.

effect, or else to stand and remain in full force and virtue.

sigillat' & Deliberat'
in presentia
 Adam Edwards.

Rich Waldrow ●

But finding your Debtor poor, and you yet account him honest, as far as it is in his Power, and you are willing to give him Time for all his Debt, when taking a Bond for your better Evidence, you may sign his Letter of Licence; for the Form of which, and other necessary Forms, of all manner of useful Writings, by reason they would be too tedious in this Book, I refer you to a small Book, published by the Publisher hereof, Intituled, *The Young Secretary's Guide*, &c. And so leave the further Management of this Affair to your Discretion.

And for the better securing Rent, or Rents, it is Enacted, *Anno Secundo Willielmi & Mariae*, May the Second, 1690. In case of Distress, That all Goods or Chattels so distrained for Rent due upon Lease, or Contract, if the Owner does not within Five Days after such Distress taken, Replevy the same, or give sufficient Security to the Sheriff, as by Law directed, that then the said Person, or Persons, in whose Custody the said Goods or Chattels remain seiz'd, is impowered by the abovesaid Act, to make Sale thereof, (having them first Appraised by Two sworn Appraisers) as the Sheriff shall direct, leaving the Overplus (if any be) in the Sheriff or Constable's Hand for the Owner's use.

A Table

A Table directing how to buy and sell by the Hundred.

*A Table directing how to buy and sell Commodities by the Hundred, and to know
by the Pound what the Hundred cost, &c.*

9	0	4	4	0	18	0	8	8	0

Understand this Table thus, viz.

If you buy any thing by the long Hundred, accounting 112 Pounds to the Hundred, and would know by the Pound what the Hundred is valued at, observe the following Directions.

Example, If you buy any Goods at 4 Pence Farthings the Pound, look in the Table for 4 Pence 3 Farthings in the first Column, and against it in the second you will find 2 Pounds 4 Shillings and 4 Pence, and so much at that rate 112 Pounds come to.

If 112 Pound weight cost 4 Pound 1 Shilling 8 Pence, to know how much it is by the Pound, look for 4 Pound 1 Shilling 8 Pence in the second Column of the Table, and right against it in the first Column you shall find 8 Pence 3 Farthings, and so much at that rate it comes to by the Pound.

Again, if you buy One Hundred Weight of Goods for 4 Pound 1 Shillings 8 Pence, and retail at 10 Pence the Pound, it comes at that rate to Pounds 13 Shillings 4 Pence; taking 4 Pounds Shilling 8 Pence from it, and you will find your self by the remainder 11 Shillings 8 Pence gainer; and in this manner may you with much ease calculate, and consider any Quantity according to the true Value contain'd in this Table.

A Table

A Table of Expences and Wages; to know by the Week, Month, Year, &c. what small Sums amount to; whereby a Person may regulate his Affairs accordingly.

The Use of the TABLE.

TO understand this Table, observe the Pence and the Shillings in the first Column, and that stands in the even row against them under the Weeks, Months, and Years, so much amounts the Expence to ; as for Example, one Penny a Day seven Pence *per* Week, two Shillings four Pence a Month, and one Pound ten Shillings five Pence a Year, as in the first regular Line of Figures in the Table ; and so successively of the rest downward, as far as the Pence go, *viz.* to Eleven : And when the Shillings begin, being divided from the Pence by a cross Line, and noted in the Margin of the Table ; as for Example, one Shilling the Day is seven Shillings the Week, one Pound eight Shillings the Month, and eighteen Pound five Shillings the Year, as noted in the first regular row of Figures, 1 for Shillings, and so of the rest in their order. But farther note in these Tables of Expence, that no more than Four bare Weeks, or Twenty eight Days are allowed to the Month, though the Reader knowing them, may easily calculate the overplus.

The Use of the Table.

AS for knowing the Use of this Table, considering the Interest at 6 *per Cent.*, take notice what the Figures in the first Column stand for marked in the Margin, then of the Month or Months you enquire after, under which are the respective Interests of the various Summs; as for example, 1 Pound, the Interest comes to a Penny the Month, or somewhat more, but so little as not to be divided; Three Months to 3 *d.* $\frac{1}{2}$. six Months to 7 *d.* nine Months to 10 *d.* $\frac{1}{4}$. or somewhat more; twelve Months to 1 *s.* 2 *d.* and the better part of a Farthing, though rarely reckon'd or, unless in great Summs, as you will find it in the first regular Line of the Pounds marked in the Margin, &c. and so proceed to inform your self in any other Summ, greater or lesser, as the Table will direct you by the Months, Pounds, Shillings and Pence over head, and in the Margin.

The Use of the TABLES beforegoing.

THese Tables will serve for many uses; but that which they will be most used about, as being most necessary, is, to find out the true Account of any Number of Ells, Yards or Pounds, being sold for so much the Yard, Ell, or Pound.

Example :

What will 5000 Ells of Locram, at 11 Pence the Ell come to? To find this, First look to the Price of the Ell at the head of the Table, then look down the side of the Table for the Number of Ells, so you shall find in the last Column but one in the Table, and in the last Line but one thereof, that 5000 of any thing at 11 Pence a-piece, comes to 229 Pound, 3 Shillings, 4 Pence.

If you cannot find your Price in one Column or Number of Things in one Line, you must make two or three Parts thereof, and add them all together.

Another Example :

What will 1500 Ells, at 9 d. $\frac{1}{2}$. come to?
In the Table of Nine-pences, you will find,

	l.	s.	d.
For 1000 Nine-pences, ————	37	10	0
For 500 Nine-pences, ————	18	15	0
In the Table of Half-pence,			
For 1000 Half-pence, ————	03	01	0
For 500 Half-pence, ————	01	00	0
	59	07	0

10	2	10	0	12	6	0	1	9	1	5

Seven Parts make One Farthing in this Table.

The

The Use of this Table is to know the Price of a Quarter of a Yard, a Quarter of a Hundred, or a Pound, when the Commodity is bought by the Hundred, and Yard; also to shew the Price of a Nail of a Yard, or Ounce, when the Commodity is bought by the Yard, or Pound.

Example.

At 3 s. the Yard, what comes a Quarter, and a Nail to?

To know which, look 3 s. in the first Column, and against that in the second you will find 9 d. which is the price of a Quarter; and in the third Col. 2 d. 1 q. the price of a Nail.

Again, If it were required to know what an Ounce of any thing is worth, the Pound costing 9 s. against 9 s. in the first Column you will find in the third Column 6 d. 3 q. which is the price of an Ounce.

If the Commodity be bought by the Hundred, you must look in the first Column for the price of a Pound; as if a Hundred Weight cost 8 l. 9 s. what is the price of 1 l.?

	s.	d.	q.	pts.	
Against 8 l. in the 1 Col. is	1	5	0	4	in the 4;
Against 9 s. in the 1 Col. is	0	0	3	6	in the 4;

Which added together, } 1 6 0 4
gives the price of 1 l.

*The Use of the Table in Chap. 10, and Chap. 11.
taken together.*

By help of the Tables in Chap. 10 and Chap. 11, are resolved such Questions in which are given Parts, besides Integers of the Commodity; as in this Example.

Example;

Example :

What does 20 C. 3 q. 9 l. of any Commodity come to, at 3 l. 10 s. 6 d. per Hundred?

First find what 20 Hundred comes to, by the Directions of Chap. 10; by which

	<i>l.</i>	<i>s.</i>	<i>d.</i>	<i>q.</i>
20 C. at 3 l. is	60	00	00	00
at 10 s. is	10	00	00	00
at 6 d. is	00	10	00	00

By the Table in Chap. 11,

	<i>s.</i>	<i>d.</i>	<i>q.</i>
Qr. is, for 3 l. —	15	00	00
for 10 s. —	02	06	00
for 6 d. —	00	01	02

17 07 02

Then by the Table in Chap. 10,

Qr. is, at 17 s. —	02	11	00	00
at 7 d. —	00	01	09	00
at 2 q. —	00	00	01	02

By the Table in Chap. 11,

	<i>d.</i>	<i>q.</i>	<i>pts.</i>
l. is, for 3 l. —	06	01	05
for 10 s. —	01	00	02
for 6 d. —	00	00	01 $\frac{1}{2}$

07 02 01 $\frac{1}{2}$

Then by the Table in Chap. 10, 9 l. comes to

at 7 d. —	00	05	03	00
at 2 q. —	00	00	04	02

All which being added together, gives the value of the whole Commodity at the rate given, viz.

73 08 06 0 $\frac{1}{2}$.

An

An easie Table for the speedy Reduction of Pounds at first sight into Shillings, Pence, and Farthings.

Pounds.	Shillings.	Pence.	Farthings
1	20	240	960
2	40	480	1920
3	60	720	2880
4	80	960	3840
5	100	1200	4800
6	120	1440	5760
7	140	1680	6720
8	160	1920	7680
9	180	2160	8640
10	200	2400	9600

The better to understand this Table, observe the Figures under Pounds, Shillings, Pence, and Farthings; and taking them in the even row, you have your Desire. As for Example; 1 Pound in the first Column makes 20 Shillings in the second, 240 Pence in the third, and 960 Farthings in the fourth; and so of the rest in order.

A very

Py
ny Y
then
most

A very useful Table, declaring what Year of Purchase a Lease or Annuity is worth immediately, upon Interest at 6 per Cent; also directing to Discount any Lease in being, and the just Value of Reversion, after a set or fixed Number of Years.

Years Lease.	Years.	Months.	Parts.	Years Lease.	Years.	Months.	Parts.
1	0	11	0	17	10	5	8
2	1	9	9	18	10	9	9
3	2	8	1	19	11	1	3
4	3	5	9	20	11	5	7
5	4	2	5	21	11	9	3
6	4	11	0	22	12	0	5
7	5	7	0	23	12	3	0
8	6	2	5	24	12	6	6
9	6	9	6	25	12	9	4
10	7	4	3	26	13	0	0
11	7	10	7	27	13	2	5
12	8	4	6	28	13	4	9
13	8	10	3	29	13	7	1
14	9	3	6	30	13	9	2
15	9	8	5	31	13	11	1
16	10	11	3	32	14	11	0

The Explanation of the foregoing Table.

PUT case that a Lease is to continue 10 Years, and you are desirous to be informed how many Years Purchase in ready Money it is worth; then look in the Table for 10 Years in the outermost or left-hand Column, and against it you will find

find 7 Years and 4 Months Rent, and 3 parts of a Month's Rent of the Lease premised; and let the Rent be what it will, *viz.* 10 *l.* *per. ann.* then 7 Years is 70 *l.* and the 4 Months is 3 *l.* 6 *s.* 8 *d.* and the $\frac{3}{10}$ of a Month amounts to near 5 *s.* which added or put together, amounts to about 73 *l.* 11 *s.* 8 *d.* ready Money for a Lease of 10 *l.* *per annum.* And farther, as to this matter, Put case a Lease you would purchase has 30 Years in the remainder. and you are desirous to know its true value, look in the Table for 30, as before, and against it you will find 13 Years, 9 Months, and $\frac{2}{10}$ parts of a Month's Purchase of the Rent in present Possession. Again, Suppose there be a Lease of 5 Years, more or less before you commence, look in the Table against 5 Years, and there you will find 4 Years 2 Months $\frac{5}{10}$ parts Purchase; subtract this out of the sum against 30, to wit, 13, 9, 2. As for a more clear Demonstration, mark the Example:

Y. M. P.			
Years 30	13	9	2
Years 5	4	2	5
	9	6	7

So that the Remainder of 30 Years after 5 Years Reversion, is 9 Years, 6 Months, 7 parts Purchase.

And these things, Reader, may very well suffice for the First Part of this Book, considering I have been concise in every particular, laying down nothing but what I hope may abundantly redound to the Advantage of Traders, being indeed the most curious Matters that particularly tend to the Satisfaction of the Industrious; from which I now proceed

ced to the **SECOND PART** I promised, in
 hope likewise to furnish it with Rules and Direc-
 tions no less necessary to be known by all Lovers
 of Art and Ingenuity; and so I take my leave, as
 to this my **FIRST PART**.

T H E

 THE
SECOND PART
 CONTAINING

*Arithmetick in a plain and familiar Method
 Also the Art of Measuring, in all its ma-
 terial Parts relating to Building, Glazing
 Paving, Painting, &c. With Exact Rules
 for Measuring Solids, &c. and Mensura-
 tion of Land, &c. Gauging in all its
 Parts. With many other things very ne-
 cessary to be known by Gentlemen and
 Workmen concerned in Carpenters, Joiners
 Glasiers, Masons, Painters or Bricklayers
 Business, &c.*

CHAP. I.
Of Arithmetick.

A Rithmetick is the Art of Numbers
 which doth not only teach to name
 number and write all things considered
 as applied to number truly, distinctly
 and intellectually; but also the Inventions of the
 Mind, and the figurative and characterical Opera-
 tions, by which we answer Questions orderly pro-
 pounded, by Number, Reason and Proportion, &c.

all of Merchandize, and other daily Affairs, as
 of Geometry, Musick, Astronomy, &c.

Of Numeration.

THE chief end hereof, is, to express and
 name any Number unknown. We write
 the Names of all Numbers by these Ten Figures
 following. 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, having
 every one his proper name, to wit, one, two, three,
 four, five, six, seven, eight, nine; this (0) signi-
 feth; and is called nothing: Also they have ano-
 ther Name and Signification, altering according
 to the Place that they be written in; as when any
 of them be written or placed together, the Figure
 toward the right-hand is said to stand in the first
 place of that Number; the Figure next unto that
 standeth in the second place; and signifieth his
 proper value ten times; the Figure next unto that
 towards the left-hand standeth in the third place,
 and signifieth there his proper value one hundred
 times; the next Figure in the fourth place signi-
 feth one thousand times; the next Figure in the
 fifth place ten thousand times. And in like man-
 ner every Figure signifies ten times as much as if
 it stood in the next place of that number towards
 the right-hand. So that when many Figures are
 written or placed together, to name or signifie the
 value of a Number, set a prick over the Figure
 which standeth in the third place, another over the
 Figure which standeth in the sixth place, and ano-
 ther over every third figure following, ever leaving
 two figures between each two pricks, and then
 name or read the figure or figures which stand to-
 wards the left-hand of the last prick, as if they
 stood a-part from the rest, adding to their Signifi-
 cation this Word thousand, so often as there are
 pricks from them towards the right-hand; but for
 every

every Two Pricks you may use the word Million instead of thousand thousand; then the next three

1	Unites,	Figures, as if they
4	Tens,	stood a-part from the
7	Hundreds	rest. adding to their
3	Thousands,	value so many times
5	Tens of Thousands,	this word thousand as
7	Hundred of Thousands,	there are pricks from
9	Millions,	them towards the
3	Tens of Millions	Right hand, or using
4	Hundred of Millions,	the word Million for
7	Thousand of Millions.	Two pricks; and in
		like manner read
		every three Figures

following of that number; all that shall be the name of the number, which those Figures so written together do signifie. So 7439753741 signifies Seven thousand thousand thousand, Four hundred thirty nine thousand thousand, Seven hundred fifty three thousand, Seven hundred forty one; or thus, Seven thousand million, Four hundred thirty nine million, Seven hundred fifty three thousand, Seven hundred forty one. In like manner may any other Number be named or expressed.

Of Addition.

THIS teacheth to express the Value of many Numbers given of one kind, in one Number; that is, to find one Number equal in value to many Numbers given.

The Numbers given to be added, may be of one Species, or of divers; if but of one Species, place the Numbers given one under another; that is, Unites under Unites, Tens under Tens, Hundreds under Hundreds, &c. then add the Value of all the Figures which stand in the first Place together

ther, to wit, 3, 4, and 7, and if they amount to
 or above nine, write their Summ just under them:
 if they make above nine, as herē 14, write
 down only the Figure which standeth in the first
 place of their Aggregate, to wit, 4 under them,
 and add the other Figure 1, or Figures, to the Figures
 which stand in the next place, and with the Num-
 ber that all that doth make, to wit, of 1, 6, 7, 5,
 as you did with the Aggregate of the Value
 of the Figures which stand in the first places, or as
 you should have done with it, if it had been equal
 to it. In like manner do with all the rest, writing
 every Figure under those Figures of the which it
 doth proceed; and then the Figures which are
 newly written are call'd the Summ Aggregate or
 total, and do signifie as much in Value as all the
 numbers given.

II. If of divers

species, place the se-

veral species or names

under another, as

Money, Pounds

under Pounds, Shil-

lings under Shillings,

Pence under Pence,

as in the Exam-

l.	s.	d.
573	12	03
234	10	02
245	09	11
234	15	10
1288	08	02

here set : In Weight and Measure Pounds un-
 der Pounds, Ounces under Ounces, &c. and Yards
 under Yards, Ells under Ells, Quarters under Quar-
 ters, &c. Then beginning from the least Species, as
 Pence, collect them into one Summ, making
 Pence, out of which take the following higher
 species, to wit, Shillings, as often as you can,
 as is heretwice; what remains, which is 2 Pence,
 write under the said Numbers; then carry the 2
 Shillings taken out to the Shillings Place, whose
 Summ, with the 2 Shillings carry'd, is 48 Shillings,
 of which take the following higher Species to
 wit,

wit, Pounds, as often as you can, that is here twice the remainder 8 write under the Shillings, and carry 2 to the first place of Pounds, the rest is performed as above. After the same manner may be added together any Numbers of divers species observing always how many of the lesser species make one of the next greater.

Subtraction.

THIS teacheth to subtract the lesser Number of two given, out of the greater, and to shew the Remainder.

The Number given may be either of one or different species; if of one species, as in the Margin, having placed the lesser Number

under the greater, set the place of Unites under Unites, Tens under Tens and Hundreds under Hundreds. Take

the first figure of the lesser number out of the first figure of the greater, and set the remainder under them: but if the first figure of the uppermost number be less than the first of the undermost, borrow 1 of the next figure

it, which is worth 10 in this place, which 10 being added to it, from their sum take or abate the undermost figure, and write the remainder just under them: then do with the figures in the second places, as if they stood in the first place ever remembering that of what figure soever you have borrowed 1, the same is esteemed for less than it doth signifie, and therefore add the borrowed to the next undermost figure, and then subtract that sum from the uppermost. In like manner do with all the rest, one after another, at the said figures, which are written under the number

ers given, are the remainder of the lesser number taken from the greater.

If of different Species, having wrote the lesser under the greater number, and each Species one under another, do as before; only if one Species of the under number cannot be taken from the same Species in the upper one, from the next greater Species borrow one, which add to the uppermost number, and from the sum take or abate the lowermost Species; the remainder write under them, and carry the one borrow'd to the said next higher Species, adding it to the lowermost Species, and subtract their sum from the uppermost, if you can; if not, borrow as before; and so proceed till the whole Subtraction is ended.

Example :

l.	s.	d.	q.
456	19	10	2
213	18	11	3
243	00	10	3

Say, 3 Farthings from 2 I cannot take, but borrowing a Penny from the next Species, which is 4 Farthings, 2 and 4 is 6, from which 3 is taken, there remains 3, which I write under them, and carry 1 to the next Species; 1 and 11 make 12, this cannot be abated from 10, therefore borrowing 1 Shilling, which is 12 Pence, 10 and 12 makes 22, from which 12 being taken, there remains 10, which write under them, and proceed.

*A necessary Question performed by Addition
and Subtraction.*

A borrows of *B* an 100 *l.* at first, an 300 *l.* 19 *s.* 11 *d.* at another time; and at twice after, 50 *l.* 10 *s.* each time; and after Six Months elapsed, payeth 40 *l.* 19 *s.* 6 *d.* every Month after for Six Months together; the Question is, How much Money *B* lent *A*? How much *A* hath repaid? And what *A* yet oweth?

To resolve this, Set the Money borrowed on under another; which being added together, the Total is what was lent; then set down the Monthly Payment Six times, the Summ whereof is what is repaid; this taken or subtracted from the first Total, giveth for its Remainder what is yet remaining unpaid, and due to *B* from *A*.

Example:

	<i>l.</i>	<i>s.</i>	<i>d.</i>		<i>l.</i>	<i>s.</i>	<i>d.</i>
	100	00	00		40	19	06
	300	19	11		40	19	06
	50	10	00		40	19	06
	050	1	00		40	19	06
					40	19	06
Borrowed	501	19	11		40	19	06
✓ Paid	245	17	00				
					245	17	00
Remains due	256	02	11				

To prove Addition and Substraction.

To prove *Addition*, Draw a Line beneath the uppermost Line of the Numbers added, and add together all the remaining numbers under it, to the total of which add the upper number cut off by the Line: If the Summ of these be equal to the total of all the given Numbers added together, your work is true, or else not.

To prove *Substraction*, Add the lesser of the numbers given to the Remainder found: If their sum is equal to the greater Number given, your Substraction is rightly performed, else not.

Multiplication.

THIS teacheth, from two Numbers given, of what kind soever, to find a third Number of the same kind, which shall contain one of them so often as the other contains Unites: To the performance hereof, it is necessary to know that the Number given to be multiplied is call'd the *Multiplicand*; the Number given to multiply by, the *Multiplier*; the Number produced to these two, the *Product* or *Rectangle*. To make the Operation hereof the easier, the following Table ought to be learn'd by heart, which contains the Fact or product of any two single Figures multiplied one to the other.

*A necessary Question performed by Addition
and Substraction.*

A borrows of *B* an 100 *l.* at first, and
300 *l.* 19 *s.* 11 *d.* at another time; and at twice
after, 50 *l.* 10 *s.* each time; and after Six Months
elapsed, payeth 40 *l.* 19 *s.* 6 *d.* every Month after
for Six Months together; the Question is, How
much Money *B* lent *A*? How much *A* hath repaid
And what *A* yet oweth?

To resolve this, Set the Money borrowed or
under another; which being added together, the
Total is what was lent; then set down the Monthly
Payment Six times, the Summ whereof is what
is repaid; this taken or subtracted from the first
Total, giveth for its Remainder what is yet
remaining unpaid, and due to *B* from *A*.

Example:

	<i>l.</i>	<i>s.</i>	<i>d.</i>		<i>l.</i>	<i>s.</i>	<i>d.</i>
	100	00	00		40	19	06
	300	19	11		40	19	06
	050	10	00		40	19	06
	050	1	00		40	19	06
					40	19	06
Borrowed	501	19	11		40	19	06
Paid	245	17	00				
					245	17	00
Remains due	256	02	11				

To prove Addition and Subtraction.

To prove Addition, Draw a Line beneath the uppermost Line of the Numbers added, and add together all the remaining numbers under it, to the total of which add the upper number cut off by the Line: If the Summ of these be equal to the total of all the given Numbers added together, your work is true, or else not.

To prove Subtraction, Add the lesser of the numbers given to the Remainder found: If their sum is equal to the greater Number given, your Subtraction is rightly performed, else not.

Multiplication.

THIS teacheth, from two Numbers given, of what kind soever, to find a third Number of the same kind, which shall contain one of them so often as the other contains Unites: To the performance hereof, it is necessary to know that the Number given to be multiplied is call'd the *Multiplicand*; the Number given to multiply by, the *Multiplier*; the Number produced to these two, the *Product* or *Rectangle*. To make the Operation hereof the easier, the following Table ought to be learn'd by heart, which contains the Fact or product of any two single Figures multiplied one to the other.

The Table.

1	2	3	4	5	6	7	8	9
2	4	6	8	10	12	14	16	18
3	6	9	12	15	18	21	24	27
4	8	12	16	20	24	28	32	36
5	10	15	20	25	30	35	40	45
6	12	18	24	30	36	42	48	54
7	14	21	28	35	42	49	56	63
8	16	24	32	40	48	56	64	72
9	18	27	36	45	54	63	72	81

The Use of this Table is this ; If you desire to know the Product of any two single Numbers, as of 4 and 6 find 4 in the last Column to the Left-hand, and 6 the first Rank above ; then casting your Eye along the Rank over against 4, and down the Column under 6 the corner where the Rank and Column meet is 24, which is the Product. The like is found by any other Numbers.

To multiply one number another, for the most part, the less Number is wrote under the greater as in the Example here set: Thus by the first Figure (6) of the Multiplier, multiply all the Figures of the Multiplicand, thus ; 6 times 8 makes 48, write 8 under 8, and carry 4 in mind ; 6 times 7 is 42 and 4 in mind is 46, write 6 under 7, and carry 4 in mind, which added to the next Product, and so proceed ; Do

ke with all the other single Figures in the *Multi-*
plier, only observing when you begin to multi-
 ply with a new Figure of the *Multiplier* or under-
 most number, begin to write the single Product
 under that Figure of the *Multiplier* that you mul-
 ply with; the several single Products standing as
 in this *Example*. Then collect all these Products
 into one Sum, and their Aggregate is the Pro-
 duct required, or Number proceeding from the
 Multiplication of the Numbers given.

By *Multiplication* are resolved all such Questions
 require to know how many of a lesser spe-
 cies are contained in any number of a greater;
 as, how many Pence or Shillings in a number of
 Pounds, or Ounces in a number of a Hundred
 weight.

Example :

l. s. d. q.

In 2345—10—11—2 How many Farthings?

Multiply the Pounds by 20, and in
 multiplying add the odd 10s. to have
 you all the Shillings contained in the
 number; which multiply by 12, and
 add the odd 11 d. thus getting all the
 Pence in the number given; this Pro-
 duct multiply by 4, and the Proceed
 sheweth how many Farthings are con-
 tained in the number given, to wit,

$$\begin{array}{r}
 2345 \\
 \times 20 \\
 \hline
 46910 \\
 \times 12 \\
 \hline
 0 \quad \text{---} \\
 93820 \\
 \times 4 \\
 \hline
 362931 \\
 \times 4 \\
 \hline
 3251726
 \end{array}$$

Another Example :

c. q. l. o.
In 49 3 11 14,
4

199
28

1593
399

5583
16

33502
5884

8934

Multiply the Hundreds by 4, adding the 3 odd Quarters to the Product that Summ multiply by 28, and add 11 to its Product, so have you the Pounds in the Number given; which multiply by 16, and add 14 to the Product, the Summ shews how many Ounces are contained in the Number given.

After the same manner, the Circumference of the Earth, containing 360 Degrees, is found to be 25000 Inches. Also, since the Birth of our Saviour, which is 1695 Years, to be 1017000 Minutes.

Division.

THIS teacheth, Two Numbers of one kind being given, to find how often the lesser Number is contained in the greater.

In this are to be noted the *Dividend*, or Number given to divide; the *Divisor*, or Number given to divide by; the *Quotient*, or Number shewing how many times the *Divisor* is contain'd in the *Dividend*. To perform the Work of *Division*,

write the *Divisor* to the Left-hand of the *Dividend*, as in the Margin; then out of the *Dividend* take so many Figures as there are in the *Di-*

$$\begin{array}{r} \text{Divisor} \quad 1286 \\ 2434 \overline{) 13456789} \quad (5 \\ \underline{12170} \end{array}$$

visor; but if the number consisting of those figures is less than the *Divisor*, then take one figure more, as in this *Example*: I take 13456, because 1345 is less than 2434 the *Divisor*; I set a prick under 6, to denote that to be the first *Dividual*, then seek how often the *Divisor* is contained in the *Dividual*; if it does not appear presently, seek how often the first figure 2 of the *Divisor* is contained in the first figure of the *Dividual*; if it consists of equal number of figures with the *Divisor*, or in the two last, as here in 16 if it consist of one more, which you will find to be 6 times, you can never take more than 9, because the *Divisor* is never contain'd more than 9 times in the *Dividend*; then multiply the *Divisor* by 6, and it produces 14604, which is greater than the *Dividual*, which must never be; therefore lessen 6 by unity, so have you 5 for the *Quotient*; which multiplying the *Divisor*, produces 12170, a number less than the *Dividual*, which I write under the same, and subtract it therefrom; the *Remainder*, 1286 write over the *Dividual*, as you see done here, dashing out the last *Dividual*.

2 Then to the Remainder 1286 take in the next Figure to the Right-hand, so you have a new Dividual 12867, which consisting of one Figure more than the Divisor, ask how often 2 is contained in 12, which is 6 times; this multiplying the Divisor produces 12170, which write under the Dividual beginning from the Right-hand, and after subtraction made, the remainder, with 8 taken in, makes a new Dividual, 6978, in which the Divisor is contained 2 times; then multiply and subtract as before; to the remainder take in 9, and with the Dividual proceed as before, cutting off the last remainder, as you see done in the *Example* under-written. So is your Division ended, the Quotient 5528 shewing how often the Divisor is contained in the Dividend: To prove which, add all the Products writ under the Dividend together; their Summ, if equal to the Dividend, with the Remainder, if any, after Division added, assures you that your Operation is truly wrought; otherwise not.

Example:

$$\begin{array}{r}
 \begin{array}{r}
 (1 \\
 2 \times (6 \\
 0891(3 \\
 \times 28870(7 \\
 2434) \times 3486789 (5528 \\
 12170082 \\
 121767 \\
 484 \\
 19
 \end{array} \\
 \hline
 13456789
 \end{array}$$

This manner of *Division* is to be preferred before all other Methods, as least perplexing the Memory, and carrying its Proof along with it.

By

By *Division* are resolved all such Questions wherein it is required to know how many of a greater species are contained in a quantity of a lesser.

Example:

In 2351726 q. How many Pounds?

$$\begin{array}{r} 2\cancel{3}3\cancel{5}0(3 \text{ d.} \\ 4) \cancel{2}2\cancel{8}\cancel{1}72\cancel{6} \quad (562911 \\ \underline{2048624} \\ 231 \end{array}$$

$$\begin{array}{r} 80\cancel{X}1(1 \text{ s.} \\ 12) \cancel{8}62\cancel{9}3\cancel{X} \quad (46910 \\ \underline{482822} \\ 7011 \end{array}$$

$$\begin{array}{r} X(1 \\ 6\cancel{9}X(0 \text{ l.} \\ 20) \cancel{4}6910(2345 \\ \underline{40000} \\ 680 \end{array}$$

Divide the Farthings by 4, the Quotient is Pence contained in the number given; this divided by 12, quotes the Shillings; and lastly, this Quotient by 20, quotes the Pounds contained in the number given, being 2345: the Remains are the odd Money, to wit, 10 s. 11 d. 2 q.

Es

Another

Another Example:

In 89342 Ounces, how many Hundred weight?

$\begin{array}{r}
 89342 \\
 16 \overline{) 89342} \quad (5583 \\
 \underline{80088} \\
 824 \\
 1 \\
 2(1 \\
 276(1 \text{ q.} \\
 28) 8883 \quad (199 \\
 \underline{2822} \\
 255 \\
 2 \\
 3(3 \text{ C.} \\
 4) 199(49 \\
 \underline{166} \\
 3
 \end{array}$

Divide the Ounces by 16, so have you the Pounds contained in the Number given; those divided by 28, quote Quarters of a Hundred; which divided by 4, gives the Hundreds weight contained in the Number of Ounces: The Remainders are the old Weight, to wit, 3 Quarters, 11 Pound, and 14 Ounces.

The Rule of Proportion, commonly call'd the **RULE OF THREE.**

THIS Rule teacheth, out of Three Numbers given, to find a Fourth unknown; and for the Excellency and great Use thereof, is call'd the *Golden Rule*, on which depend all Questions relating to Merchandise, and the Use of Man. Of the Three Numbers given or known, always Two are of like kind, or of one Denomination; to one of which the Question is always annexed, and is known by the word *How*, *What*, &c. preceding it: Therefore to state any Question given for Operation, set the Number to which the Question is annexed, in the third place; the other of the same kind

kind in the first place, the remaining or third number set in the second place, or middle, which is alway of the same kind with the fourth. The Question thus stated, consider if the Proportion be direct or inverse, thus ; if *more* requires *more*, or *less* requires *less*, the Proportion is direct, and is resolved by multiplying the third number by the second, and dividing by the first, the Quotient produced being the fourth number unknown : but if *more* require *less*, or *less* require *more*, then the Proportion is inverted, and is resolved by multiplying the first number by the second, and dividing by the third, so producing the fourth unknown.

Quest. 1. If 18 s. buys 16 lb. of Sugar, what will 432 lb.

lb. s. lb. lb.

4838
2

Here the Questionary number is 432, set that therefore in the third place ; the number of the like kind in the Question, is 16 Pound wherefore set that in the first place, the other of course falls in the second place : having thus stated my Question, observe that altho' the second and third numbers be of one kind, yet they are not of one species ; bring therefore the Hundreds into Pounds.

as was shewn in *Multiplication*; which being done, I find the Proportion to be direct, because it is evident, the fourth number must exceed the third, after the manner as the second exceeds the fourth; and therefore multiplying the third number by the second, and dividing by the first, is got the fourth number sought.

Quest. 2. If in 18 Days 100 Men performed a Work, in how many Days will 80 Men perform the same?

<i>Men</i>	<i>Days</i>	<i>Men</i>	<i>Days</i>
100	— 18 —	80	— 22 $\frac{2}{3}$ —
18			
—		24	<i>Days</i>
1800	80)	1800	(22 $\frac{2}{3}$
		1600	
		00	
		01	
		1	

Here the Questionary number being 80 Men, I write that in the third place, and 100 of the like kind in the first; the other of course I set in the second place.

Having thus stated the Question, the Proportion will be found to be inverse; for here the second is not to the fourth as the first is to the third, but the first exceeds the third, as inversely the fourth exceeds the second; that is, *fewer Men require more Time*, and therefore multiply the first number by the second, and divide by the third, the Quotient is the fourth number sought.

On this Rule depends the Solution of all Questions relating to the Use of Man, in which Proportion is concerned; and being well understood, nothing will be difficult to resolve, that shall at any time be met with, whether it relates immediately to Trade, or the working the Proportions used in Geometry, Astronomy, or other Parts of the Mathematicks.

C H A P. II.

Of Mensuration.

THE common Instrument by which all things are measured, relating to Board, Glass, Pavement, Tyling, Wainscot, Walls, and the like, being by the Foot-Rule, commonly call'd the *Carpenters Rule*, which contains or is divided into 12 Inches, and every Inch into 12 Parts, and every Part into 12 other Parts, and so on. Before I come to shew how to Measure, I shall first teach the Learner how to Multiply Feet, Inches, and Parts of an Inch, into Feet, Inches, and Parts of an Inch, by an easie and quick Method, thus:

Multiply the Summ given to be multiplied by the Integers of the Multiplier, beginning from the least Denomination, and carry One for every Twelve to the next. Then for the Parts,

Multiply Inches into Feet; which divided by 12, quotes Feet and Inches.

Multiply Inches into Inches; which divided by 12, quotes Inches and Parts.

Multiply Inches into Parts; which divided by 12, quotes Parts and Parts.

Parts into Feet, and divided by 12, quotes Inches and Parts.

Parts into Inches, and divided by 12, quotes First Parts and Second Parts.

Parts into Parts, and divided by 12, quotes Second and Third Parts: and so of the rest.

Observe always, That if the Quotient be more than 12, then divide it again by 12, and the Quotient will be a Denomination higher.

For the Ease and Help of the Division, use the Table following, with 12 at the top thereof; observe carefully to write every Denomination one under another; the Summ is the Product.

A Table

A Table for the Multiplying of Foot Measure.

12

1	—	12	29	—	348
2	—	24	30	—	360
3	—	36	31	—	372
4	—	48	32	—	384
5	—	60	33	—	396
6	—	72	34	—	408
7	—	84	35	—	420
8	—	96	36	—	432
9	—	108	37	—	444
10	—	120	38	—	456
11	—	132	39	—	468
12	—	144	40	—	480
13	—	156	41	—	492
14	—	168	42	—	504
15	—	180	43	—	516
16	—	192	44	—	528
17	—	204	45	—	540
18	—	216	46	—	552
19	—	228	47	—	564
20	—	240	48	—	576
21	—	252	49	—	588
22	—	264	50	—	600
23	—	276	60	—	720
24	—	288	70	—	840
25	—	300	80	—	960
26	—	312	90	—	1080
27	—	324	100	—	1200
28	—	336			

Example:

Example :

Feet. Inches. Parts. Feet. Inches. Parts.
 Multiply 8 9 6 by 7 8 5

To do this; 7 times 6 is 42 in the Table; the nearest number on the left hand is 36, the difference 6 I write down, and carry 3, which stands against 36, to the next Denomination: 7 times 9 is 63, and 3 carry'd makes 66: the nearest Number in the Table is 60, the difference 6 I write down, and carry 5 to the next Denomination: 7 times 8 is 56, and 5 carried is 61, which write under Feet.

$$\begin{array}{r}
 8-9-6 \\
 7-8-5 \\
 \hline
 61-6-6 \\
 5-4-0 \\
 0-6-0 \\
 0-0-4 \\
 0-3-4 \\
 0-0-3-9-0 \\
 2-6 \\
 \hline
 67-8-5-11-6
 \end{array}$$

Then to multiply by the 8 Inches, I say 8 times 8 is 64, against its nearest number 60 I find 5, and the remainder is 4; that is, 5 Foot, 4 Inches. — Again, 8 times 9 is 72, against which in the Table I find 6, which is 6 Inches; and 8 times 6 is 48, against which stands 4, that is, 4 first Parts.

Lastly, To multiply the Parts, 5 times 8 is 40, the nearest number in the Table to it is 36, against which I find 3, the difference being 4, that is, 3 Inches, 4 Parts; 5 times 9 is 45, against its nearest number 36 I find 3, and there remains 9, that is, 3 first Parts, and 9 second Parts: — 5 times 6 is 30, against 24, its nearest number, I find 2, and the remainder is 6, that is, 2 second Parts, and 6 third Parts; all these added together, gives the Product.

CHAP. III.

To Measure things which have Length and Breadth, as Board, Glass, Pavements, Tyling, Wainscot, and the like.

THese things being all Squares, or Parallelograms, the content thereof is had by multiplying the Length into the Breadth, which is taken commonly in Feet, Inches and Parts.

First, Of Board and Glass, both being measured by the Foot-square, containing 144 square Inches.

Example :

A piece of Board 16 Inches square, how many square Feet does it contain.

1 — 4

1 — 4

— — —

1 — 4

— 4

1 — 4

1 — 2 — 4

Writing 1 Foot 4 Inches under 1 Foot 4 Inches, multiply them together, as is taught in Chap. II. the Area, or Content, is 1 square Foot, 9 Inches, and 4 Parts.

A piece

A piece of Board 16 Foot 6 Inches long, and 9 Inches 6 Parts broad; How many square Foot does it contain?

The Answer, by multiplying as above is 13 Foot, and 9 Parts.

$$\begin{array}{r}
 16 \text{ --- } 06 \text{ --- } 00 \\
 00 \text{ --- } 09 \text{ --- } 06 \\
 \hline
 12 \text{ --- } 04 \text{ --- } 06 \\
 8 \text{ --- } 03 \\
 \hline
 13 \text{ --- } 00 \text{ --- } 09
 \end{array}$$

A Window that hath 4 Panes of Glass, each Pane 1 Foot 9 Inches, 6 Parts long, and 4 Foot 7 Inches, 6 Parts broad; How many square Foot of Glass are there in all?

Multiply the Length by 4, 4 times 6 is 24; which divided by 12, quotes 2, and nothing remains; I carry 2 to the next denomination, and write down nothing; 4 times 7 is 28, and 2 carried, is 30; which divided by 12, quotes 2, and leaves 6; I write down 6, and carry the 2 to the next, &c. This done, I make 18 Foot 6 Inches for the Breadth, and proceed as before.

$$\begin{array}{r}
 4 \text{ --- } 7 \text{ --- } 6 \\
 4 \\
 \hline
 18 \text{ --- } 6 \text{ --- } 00 \\
 1 \text{ --- } 9 \text{ --- } 6 \\
 \hline
 18 \text{ --- } 6 \\
 13 \text{ --- } 6 \\
 4 \text{ --- } 6 \\
 9 \text{ --- } 3 \\
 \hline
 33 \text{ --- } 1 \text{ --- } 9
 \end{array}$$

A Table

A Table shewing how much of a Board in length will make a Foot square, the breadth being in Inches.

10	$14\frac{2}{5}$
11	$13\frac{1}{11}$
12	12
13	$11\frac{1}{13}$
14	$10\frac{4}{14}$
15	$9\frac{2}{3}$
16	9
17	$8\frac{2}{17}$
18	8
19	$7\frac{1}{19}$
20	$7\frac{1}{5}$
21	$6\frac{2}{7}$
22	$6\frac{4}{11}$
23	$6\frac{2}{3}$

24	6
25	$5\frac{1}{5}$
26	$5\frac{2}{13}$
27	$5\frac{1}{3}$
28	$5\frac{1}{7}$
29	$4\frac{2}{29}$
30	$4\frac{2}{5}$
31	$4\frac{2}{31}$
32	$4\frac{1}{2}$
33	$4\frac{1}{3}$
34	$4\frac{1}{17}$
35	$4\frac{2}{7}$
36	4
48	3
60	$2\frac{1}{3}$
72	2
84	$1\frac{1}{7}$
96	$1\frac{1}{8}$
108	$1\frac{1}{9}$
120	$1\frac{1}{10}$
132	$1\frac{1}{11}$
144	1

The Use of the foregoing Table, is,

That having the Length that will make the Breadth a Foot, to take that by a pair of Compasses or Ruler, and measure how many times the said quantity is contained in the length of that Board, and reckon it to be so many Foot long.

Secondly, Of Pavements, Wainscot, Tiling, Painting, &c. which are measured by Yard Square, containing nine square Feet.

The Rule is, to multiply the Length by the Breadth in Feet and Inches, as is taught before, and to divide the Product by 9.

Example :

There is a Court to be paved, that is 18 Foot 6 Inches long. and 14 Foot 6 Inches broad; How many square Yards are contained in the Pavement?

Having multiply'd the length and breadth together, divide the square Feet by 9, so have you 29 Yards, 7 Foot, 3 Inches for the Content of the Pavement

$$\begin{array}{r}
 18:6 \\
 14:6 \quad 8(7 \\
 \hline
 268(29 \\
 72 \quad 89 \\
 187 \\
 9:3 \\
 \hline
 268:3
 \end{array}$$

Example :

Example :

There is a Room to be Plaster'd, the two side Walls being 14 Foot long; and the two end Walls 10 Foot broad, and the height of the Room is 7 Foot 6 Inches; How many Yards are there in the Plastering of the same Walls, and over the head?

$$\begin{array}{r}
 14 \\
 14 \\
 10 \\
 10 \\
 \hline
 48 \text{ Feet} \\
 7 : 6 \\
 \hline
 336 \\
 24 \\
 \hline
 9) 360 \\
 \hline
 \text{Yards } 40 : 6 \\
 15 : 5 \\
 \hline
 15 : 5
 \end{array}$$

Add all the two sides and ends together, so have you the Perimetre of the Room, which multiply into the height, and the Product will be the square Feet contained in the sides and ends, which divided by 9, gives the square Yards; then multiply the length of one of the sides into the length of one of the ends, and the Product is the Area or Content of the Ceiling in Feet; which divide by 9, and you have Yards; this added to the other Product, gives what was required.

3. *Of Walls, or Bricklayers Works, &c.*

These are measured by the Rod, being in length 16 Foot $\frac{1}{2}$, the square 272 Foot 3 Inches; the dimension of length and breadth, or height, being taken in Feet, Inches and Parts, must be multiplied one in the other to get the Content; and the Product divided by 272, to get the square Rods: The Three Inches is always allowed the Workman to make up Measure.

Example :

There is a Wall 54 Foot long, and 27 Foot 8 Inches high; How many square Rod is contained therein?

54	
27 : 8	(134
378	1493 (5 Rod, 134 Foot.
108	262
36	
1494	

Walls, although reckoned among Superficies, without any respect had to the thickness, when they are a Brick and half, which is the thickness that must be allowed in this Work; yet when Walls are either wanting of this, or exceed it in thickness, then the thickness must be reduced to a Brick and a half: To do which, multiply the height and depth of the Wall by such Parts as in the little Table here set stand against the thickness given

given, so shall the Wall be encreased or decreased in Heighth, to make it a Brick and an half.

Example:

A Wall whose Thickness is 3 Bricks, being 14 Foot 6 Inches in Heighth, and 44 Foot 10 Inches in Length, How many square Rod is contained therein?

Against 3 Bricks in the first column you find the number 2; therefore multiply the Heighth by it, and the encreased Heighth is for $1\frac{1}{2}$ Brick.

$$14 : 6$$

$$2$$

$$29 : 00$$

$$44 : 10$$

$$116$$

$$116$$

$$24 : 2$$

$$1300 : 2$$

$$12$$

$$82 : (4 \text{ Rod, } 212 \text{ Foot, } 2 \text{ Inches.})$$

$$2300$$

$$272$$

Table to reduce Walls above or under a Brick and half thick to the customary thickness of a Brick and a half.

C H A P.

P. IV.

Of the Measuring of Solid Bodies.

IN the Measuring of Timber, Stone, and for like Solid Bodies, there must be respect had not only to the Breadth and Length, but also to the Thickness thereof: Note therefore, That a Foot of Timber is a Foot square every way, or in Length, Breadth and Thickness, and contains 1728 Inches, every Inch being square like a Foot, and so is the Foot supposed to be; and if it were of this either in Breadth or Thickness, it must have it in Length. Now, the most common Shape which Timber is brought into before it is measured, is a long square, having equal sides: To find the Content of which, multiply the Breadth by the Thickness, and the Product by the Length, you will have the whole solid Content.

Example:

A Piece of Timber 14 Foot long, and 8 Inches broad.

Now, the Shape of Timber hath the End thereof, either a Square, an Oblong, or some other Figure; the general Rule to measure them all, is to find the *Area* of the End, and multiply that by the Length.

Example

Example.

A piece of Timber whose Breadth and Thickness is 8 Inches, and Length 14 Foot, what is the Solid Content thereof?

Multiply the Breadth and Thickness one into another, which makes 5 Inches 4 Parts; which multiply by 14, the Length, and the Solid Content is 6 Foot, 2 Inches, 8 Parts.

$$\begin{array}{r}
 8 \\
 8 \\
 \hline
 5 \ 4 \\
 14 \\
 \hline
 5 \quad 10 \\
 4 \quad 8 \\
 \hline
 6 \quad 2 \quad 8
 \end{array}$$

Example:

A piece of Timber being 1 Foot 2 Inches broad, 10 Inches 6 Parts thick, and 15 Foot 9 Inches long; How many Solid Feet does it contain?

Feet, Inch, Parts.

$$\begin{array}{r}
 1 \quad 2 \quad 00 \\
 0 \quad 10 \quad 6 \\
 \hline
 10 \quad 8 \\
 1 \quad 6 \\

	39	14.276	69	04.560	99	02.218
					100	02.171

The Use of the foregoing Table is this :

Take the Compass of the Tree, and so
ad how many Inches it is about ; took this
Compass in the Table, and by it you shall
e how many Inches make a Foot of Timber ;
m with a Ruler, or a Pair of Compasses
asure how many times you find that length
the piece of Timber, and so many Foot there
of it.

C H A P. V.

Of Gauging.

Beer and Ale is usually reckoned and sold by Barrels, Kilderkins, and Firkins.

If you would know how many Gallons, Quarts, or Pints, are in any of these, these Tables will shew you.

For Beer Vessels.

	<i>Pints.</i>	<i>Quarts.</i>	<i>Pottles.</i>	<i>Gallons.</i>
One Barrel is	288	144	72	36
One Kilderkin is	144	72	36	18
One Firkin is	72	36	18	9

For Ale Vessels.

	<i>Pints.</i>	<i>Quarts.</i>	<i>Pottles.</i>	<i>Gallons.</i>
One Barrel holds	256	128	64	32
One Kilderkin	128	64	32	16
One Firkin	64	32	16	8

By this you may see, that, as the Proverb saith *Many Hands (so many Mouths) make quick Work* For there being but 128 Quarts in a Barrel of Ale, 144 Quarts in a Barrel of Beer, a Company of Soldiers, which are usually 130, or 140 Men, may very well drink it up, it being but each Man his Quart. And by this you may in some sort know what will furnish a greater Army or Navy. For a Man of War having 250 Men on board

board, spends a Tun of Beer every Day, each
Man being allowed his Kan, which is about a
Wine Gallon.

Wine Vessels with their Contents, are thus :

	Pints.	Quarts.	Pottles.	Gal.
One Tun is	2016	1008	504	252
One Pipe or Butt	1008	504	252	126
One Punchion	672	336	168	84
A Hoghead holds	504	252	126	63

Half an Hoghead	252	126	63	31
A Runlet holds	144	72	36	18

*The common Names and Contents of the Measures of Corn,
or Grain, are thus:*

	Pints.	Quarts.	Pottles.	Gallons.	Pecks.	Bush.	Strikes.	Cornec.	Quar.
A Last is —	5120	2560	1280	640	320	80	40	20	10
A Quarter —	512	256	128	64	32	8	4	2	1
A Cornec —	256	128	64	32	16	4	2	1	
A Strike —	128	64	32	16	8	2	1		
A Bushel —	64	32	16	8	4	2	1		

By this you may see that 500 Men may very well spend a Quarter of Wheat every Day, it being but a Pint for each Man: And a Regiment of Horse, being about 600, may spend a Last, or 10 Quarters of Oats, every day, it being but a little above a Gallon, or Half a Peck, for each Horse, to wit, 640 Gallons. By this a Governour of a Castle may guess how to furnish a Place with these Things to hold out any time, or may know how long he is able to hold-out with the Provision he hath.

To find the Contents of the Cask.

THere are Two things herein chiefly necessary :

First, These Vessels being of Irregular Forms, how to reduce them to a Regular Proportion.

Secondly, To find the true Quantity of the Gallon in Cubick Inches, or Parts of a Foot.

For the First, the best way is this (according to Mr. Oughtred :

Measure the Diameter of the Vessel both at the Bung and at the Head thereof, and by the Diameters find out the Areas of the Circles; then take two Thirds of the Area of the Circle at the Bung, and one Third of the Area at the Head, and add them together; and, lastly, multiply the sum thereof by the length of the Vessel.

For the Second Thing.

The Content of our English Gallon, which is the Measure of all these Vessels, this is most commonly received, That a Wine Gallon contains 231 Cubick Inches.

But it being very troublesome to do this at length, *viz.* First to find the Area of the Circles, and then the Content of the Vessel in Cubick Inches; and lastly, to reduce this into Gallons.

ions: Therefore, for ease, I have calculated the following Table, which shews you one third and two thirds of the Area of any Circle, ready cast up in the Parts of a Gallon, from any Diameter to 60 Inches, whereby so much of the Labour will be saved.

A Table

Inches of the Diameter.

A Table for the Gauging of Wine Vessels.

Inches of the Diameter.

The Use of the foregoing Table is this:

First, Measure the Diameter at the Head, and find the number in the Table belonging to it. Then measure the Diameter of the Bung, and find the number belonging to that. Then add these two together, and multiply the Sum thereof by the Inches of the Vessels length, measured in the inside of the Vessel from Head to Head.

Suppose a Vessel having the Diameter at the Head 18 Inches, the Diameter at the Bung 32 Inches, and the Length thereof 40 Inches, the Content thereof is thus found:

<i>The Table shews,</i>		<i>G. parts</i>
For 18 Inches at the Head		0.36
For 32 Inches at the Bung		2.32
These two added together, make,		2.68
Which multiplied by the Length,		
being 40 Inches		4
Makes		107.52

The chief Difficulty is, to add these Parts together, and to multiply the Parts; wherefore, observe that you set the Integers one under another, and the Parts one under another, and add as was taught in *Addition*; And also multiply the same way as is taught in *Multiplication*, only observing that you set a prick after so many Figures from the Right-hand in the Product, as are the greatest number of Parts in one of the numbers added; and also, after so many Figures from the Right-hand to the Left in the Product, as there

are Parts both in the Multiplicand and Multiplier, for then the number on the Left-hand of the Prick, in both Cases, is a whole Number, and that on the Right-hand is Parts.

Of the Measuring of Ale or Beer Vessels.

To measure Ale and Beer Vessels, your best way will be to make the like Tables as for Wine Measure, and so the Practice will be all one, premising first that the Beer or Ale Gallon contains 88 Inches and three Quarters.

This Table is used as the former,
as in this Example:

Suppose a Vessel having the Diameter at the Head 19 Inches, the Diameter at the Bung 32 Inches, and the Length thereof 49 Inches, the Content is found thus:

The Table shews,

For 19 Inches at the Head	<i>G parts</i> 0 327
For 32 Inches at the Bung	1.856
These two added together, make	2.183
Which multiplied by the Length 49 Inches	49
	19.647
	87.32
Makes	106.967

How to Gauge great Tuns.

FOR the Measuring of the large Tuns and Vessels of Brewers, to know how many Barrels they hold, I have framed the following Table for square Tuns, the Gallon reckoned at 282 square Inches, as is agreed between the Collectors of the Excise and the Brewers: For the Understanding whereof, you must take notice, That this Table is only made for even Feet, and shews the true Quantity of the Plane of any square Vessel or Tun,

Tun, whose Length and Breadth you know from one Foot square to twenty Foot square, reckoning the said Plane to be but one Inch deep. This Content is set down in the Table, in Barrels, and Parts of a Barrel, reckoning after this manner :

	Parts
Every Barrel contains	10000
Every Kilderkin contains	5000
Every Firkin contains	2500
Every Gallon contains	0278
Every Pottle contains	0139
Every Quart contains	0069 $\frac{1}{2}$
Every Pint contains	0035

The Use of the following Table will most plainly appear, in the Answering these Questions following.

Question 1. *I would know the Content of the Bottom of a Tun, which is six Foot square each way.*

Answer. Look where you find 6 Foot in the side of the Table, and VI Foot in the bottom or upper part of the Table meet in a square, and there you shall find 0.5106; which shews that a Tun being 6 Foot square, holds 0 Barrels, 5106 Parts, that is half a Barrel, and a little more. For 5000 Parts is a Kilderkin, or half a Barrel, and 106 Parts is about three Pints over.

Question

Question 2. *A Tun is Nine Foot one way, and Four
Foot the other way; What is the Content?*

Answer. Find where 9 Foot in the side of the
Table, and IV Foot in the bottom or upper part
of the Table meet, and in the square thereof you
shall find 0.5106, which is the same Content as be-
fore. For as 6 times 6 Foot is 36 Foot, so 4 times
9 Foot is also 36 Foot.

Now you must understand, that this is the Con-
tent not of the whole Tun, but only of the plain
of the bottom thereof; reckoning the depth of
the Liquor therein to be just one Inch. So that if
the Tun, or Liquor in the Vessel be 10 Inches
deep, then the Content thereof will be 10 times
as much, viz. 5.1060; that is, 5 Barrels, and 1060
Parts. If the Tun, or depth of the Liquor, be
20 Inches deep, then it is 20 times as much; that
is, 10.2120, or 10 Barrels, 2120 Parts, and so
you must still multiply the Content of the bottom
of the Tun by the Number of the Inches of the
depth of the Tun, or Liquor, and it will give you
the Content of the whole Tun; all beyond the
fourth Figure being so many Barrels, and the Four
last Figures shew the Parts under a Barrel.

And thus when the length and breadth fall out
in even Feet, it is very easie to know the Contents
thereof by this little Table.

Feet of the Length or Breadth.

*Rules for the Measuring of round Tuns,
or Vessels.*

First you must observe whether the Tun be
of one breadth at the top and bottom, or no.
If it be of one and the same breadth at the top and
the bottom, then it is a Cylinder, and this fol-
lowing Table, (without any further trouble) re-
dily shews the Content thereof, according to the
Inches of the Diameter or Breadth thereof, reckon-
ing the Liquor therein to be just one Inch deep
and this Content is set down in Barrels, and 1000
Parts of a Barrel, as before was reckoned in the
Square Tuns.

A Table

Inches of the Diameter,

A Table, which by the Diameter of any round Tun, shews the content thereof in Barrels, and 10000 Parts.

28	0.0606	58	0.2603	88	0.5992	118	1.0772
29	0.0650	59	0.2693	89	0.6129	119	1.0955
30	0.0690	60	0.2785	90	0.6268	120	1.1104

Thus

Thus a round Tun, whose Diameter or Breadth is 10 Foot, or 120 Inches, the Content for 1 Inch depth, is, 1, 1140, that is, 1 Barrel, and 114 Parts. Now if this Tun, or the Liquor in it, be 10 Inches deep, then the Content thereof is 10 times as much, that is, 11, 1400. If it be 20 Inches deep, then it is 20 times as much, that is, 22, 2800; and so for any other depth, you must multiply the number found in the Table, by the Inches of the depth.

CHA

C H A P. VI.

Considerations relating to the Measuring of Land.

THE several Denominations of Measuring are as follows.

Barly, Corns	1	Inch.
Inches	12	Palm.
Inches, or 3 Palms	1	Foot.
Foot	1	Yard.
Foot 9 Inches	1	Ell.
Foot	1	Geometrical Pace.
Yards or $16\frac{1}{2}$ Feet	1	Perch.
Poles, or 132	1	Furlong.
Paces	1	Mile.
Furlongs, or 320	1	League.
Perches		
Miles		

In general, Land is measured by a Pole, Perch, Rod, which is usually 16 Foot and a half long; according to the Statute, 4 Poles in breadth, 40 Poles in length, make an Acre; from which, and the Table above, is made this Table following.

A Table

	Inches	Feet.	Yards	Paces	Perch	Chain	Acre	Mile.
Inch	1	12	3 6	6 1	198	792	7920	63360
Feet	144	1	3	5	16.5	66	660	5280

Mile	401448960	27878400	3097600	11151136	102400	6400	640	1
Square								

This Table, shows how many Inches, Feet, Yards, Paces, Perches, Chains, Acres, there are in a Mile, either Long or Square; or any of them all in any of the other that are less: As for Example: How many Inches are there in a Long Perch? Look for Perches in the uppermost Row, and under it I find 198, which are the Inches in a Long Perch: But to know the Inches in a Square Perch, look for Perch on the Left hand, and in the Inch Column I have 39204; for multiplying 195 by 196, it produces 39204.

TABLE for Land-Measure:
 shewing how many Poles in Length
 will make an Acre at any Breadth
 assign'd in a Pole, or the contrary.

(120)

Pole		Pole		Feet	Inch
78	— — — —	2	— — — —	0	10
79	— — — —	2	— — — —	0	5
80	— — — —	2	— — — —	0	0

How to use the foregoing Table.

If you have a piece of Land, or Field Nine Pole broad, and you desire to know how many Pole in length will make an Acre; against 9 in the first Column you will find — 17 — 12 — in the second Column, for the length.

TH

THE THIRD PART:

Containing

The Principal Roads of *England*, with an Account of Fairs, Carriers, and Waggoners Post-Office, and other Necessary Things.

C H A P. VII.

The Principal Cities and Market-Towns in England and Wales, with the Distance of one City and Market-Town from another. To which is added, An Account in what County each City and Town lies; and the respective Market Days; a thing useful to be known by all Wholesale Dealers. And likewise it is useful to direct all Tradesmen in their travelling upon the Road from Town to Town, and from City to City.

The Road from London to Huntington, Stamford, York, Durham and Berwick, — to Newmarket and Norwich, — to Cambridge, Ely, and King's Lynn. — to Bury, — to Walsingham, — to Peterborough and Boston, — to Lincoln, Hull and Flamborough.

The Table of R O A D S Described.

The first Column contains the Names of Places wherein Cities are in Capital Letters, as in *Berwick Road*, YORK, &c. and Market-Towns in Italick as *Hoddesdon*, &c. The Letters after them shew the Days their Markets are kept on. The second Column shews the Distance of one Place from another: And the third, the Distance of each from *London*, in Computed and Measured Miles; *cm.* stands for Computed, and *mm.* for Measured Miles. The last shews the County each Town and City lies in; a thing of great use in directing of Post Letters and Parcels.

Alphabetical Account

C H A P. VII.

Of the Post-Office.

THIS Office is now kept in *Lombard-street*; the Revenue belongs to Her Majesty.

From this General Office, Letters and Pacquets are dispatch'd,

On Mondays,

To *France, Spain, Italy, Germany, Flanders, Sweden, Denmark, Kent, and the Downs.*

On Tuesdays,

To *Holland, Germany, Sweden, Denmark, Ireland, Scotland, and all Parts of England and Wales.*

On Wednesdays,

To all Parts of *Kent and the Downs.*

On Thursdays,

To *France, Spain, Italy, and all Parts of England and Scotland.*

On Fridays,

To *Flanders, Germany, Italy, Sweden, Denmark, Holland, Kent, and the Downs.*

On Saturdays,

To all Parts of *England, Wales, Scotland, and Ireland.*

Letters are returned from all Parts of *England and Scotland* certainly every *Monday, Wednesday, and Friday*; from *Wales* every *Monday and Friday*; and from *Kent and the Downs* every day; but from other Parts more uncertainly, in regard of the Sea

A Letter containing a whole Sheet of Paper, is convey'd 80 Miles for 2 *d.* two Sheets for 4 *d.* and an Ounce of Letters for 8 *d.* and so proportionably; and a Letter containing a Sheet is convey'd above 80 Miles for 3 *d.* two Sheets for 6 *d.* and

and every Ounce of Letters for 12 d. A Sheet is conveyed to *Dublin* for 6d. two for a Shilling, and an Ounce of Letters for 12 d. A single Letter to *Berwick*, 3 d. A double, 6 d. An Ounce, 1 s. 6 d.

This Conveyance by Post, is done in so short a time, by Night, as well as by Day, that every 24 Hours the Post goes 120 Miles; and in 5 Days an Answer of a Letter may be had from a Place 300 Miles distant from the Writer.

Moreover, if any Gentleman desire to ride Post to any principal Town of *England*, Post-Horses are always in readiness (taking no Horse without the Consent of his Owner,) which in other Kings Reigns was not duly observed; and only 3 d. is demanded for every English Mile; and for every Stage, to the Post-Boy 4 d. for Conducting.

C H A P. VIII.

The several Rates that now are, and have been taken for the Carriage of Letters, Pacquets and Parcels, to or from any of Her Majesty's Dominions, and to and from any other Parts or Places beyond the Seas, are as followeth; that is to say,

 be allowed without Rate in the price of the Letters ;
 and also the Covers of the Letters not exceeding
 a Sheet, to *Marseilles, Venice, or Leghorn*, towards
Turkey.

The said Office is managed by a Deputy, and
 other Officers, to the number of Seventy seven
 Persons, who give their actual Attendance respec-
 tively, in the Dispatch of the Business.

Upon this Grand Office depend One hundred
 eighty two Deputy-Post Masters in *England* and
Scotland, most of which keep Regular Offices in
 their Stages, and Sub-Post-Masters in their Bran-
 ches: And also in *Ireland*, another General Office
 for that Kingdom, which is kept in *Dublin*, con-
 sisting of Eighteen like Officers, and Forty five
 Deputy Post Masters.

The

The present Post-Master-General keeps constantly, for the Transport of the said Letters and Packets,

between Eng-
land and {
France, two Pacquet-Boats.
Flanders, two Pacquet-Boats.
Holland, three Pacquet-Boats.
Ireland, three Pacquet-Boats.

And at *Deal*, two Pacquet-Boats for the *Downs*.

All which Officers, Post-Masters, and Pacquet-Boats are maintained at his own proper Charge

And as the Master-piece of all those good Regulations, establish'd by the present Post-Master-General, for the better Government of the Office, he hath annexed and appropriated the Market-Towns of *England* so well to their respective Post-stages, that there is no considerable Market-Town but hath an easie and certain Conveyance for the Letters thereof, to and from the said Grand-Office, in the due course of the Mails every Post.

Note, That on what Day of the Week the Year begins, the Figure under each Month is the same Day of the Week until the Year's end. As for Example : The 25th Day of the first Month called March, was on the Third Day of the Week called Tuesday ; under September and December you see (2.) which sheweth Tuesday to be the Second Day of each of these Months ; and so go on to the end of the Month : and the like in all the other Months.
